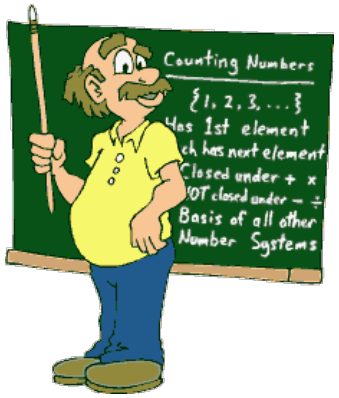
Lektion 5: Assembly programmering



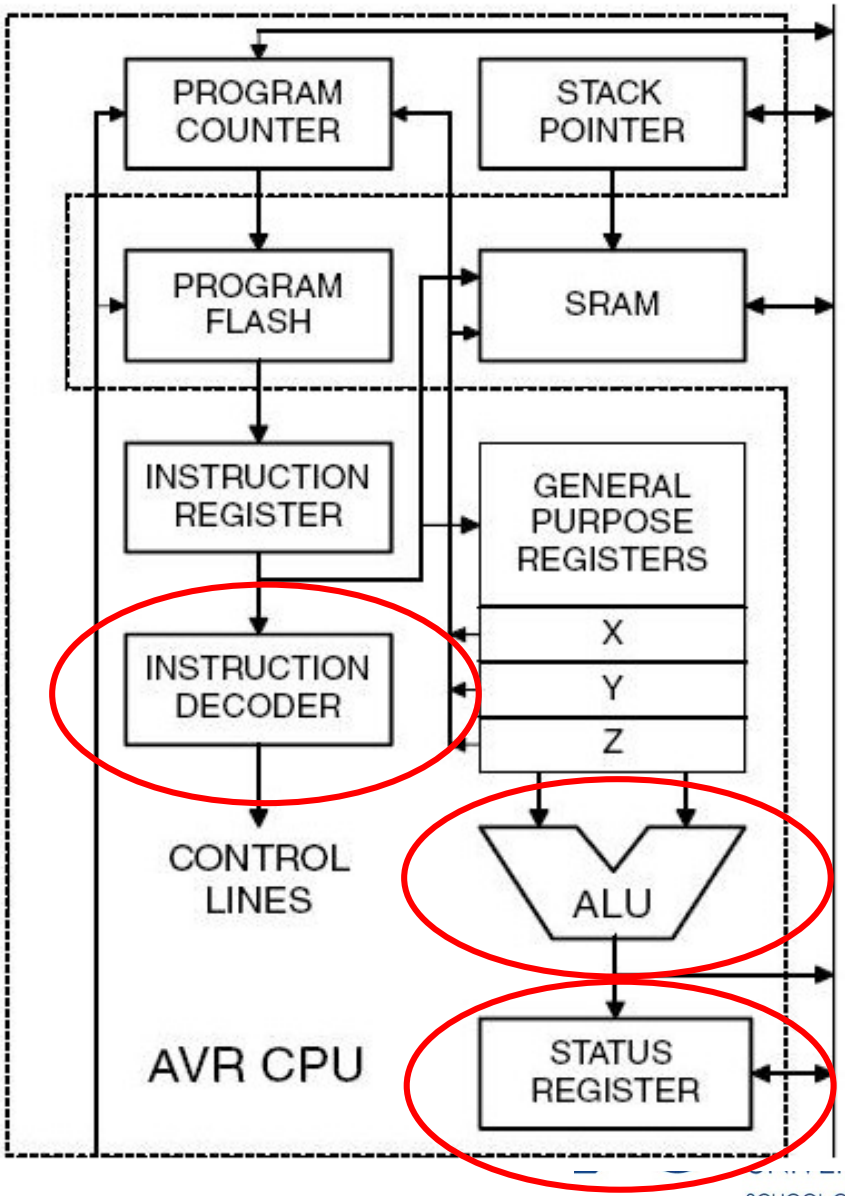
Version: 6-9-2017, Henning Hargaard

AVR CPU og maskin - kode

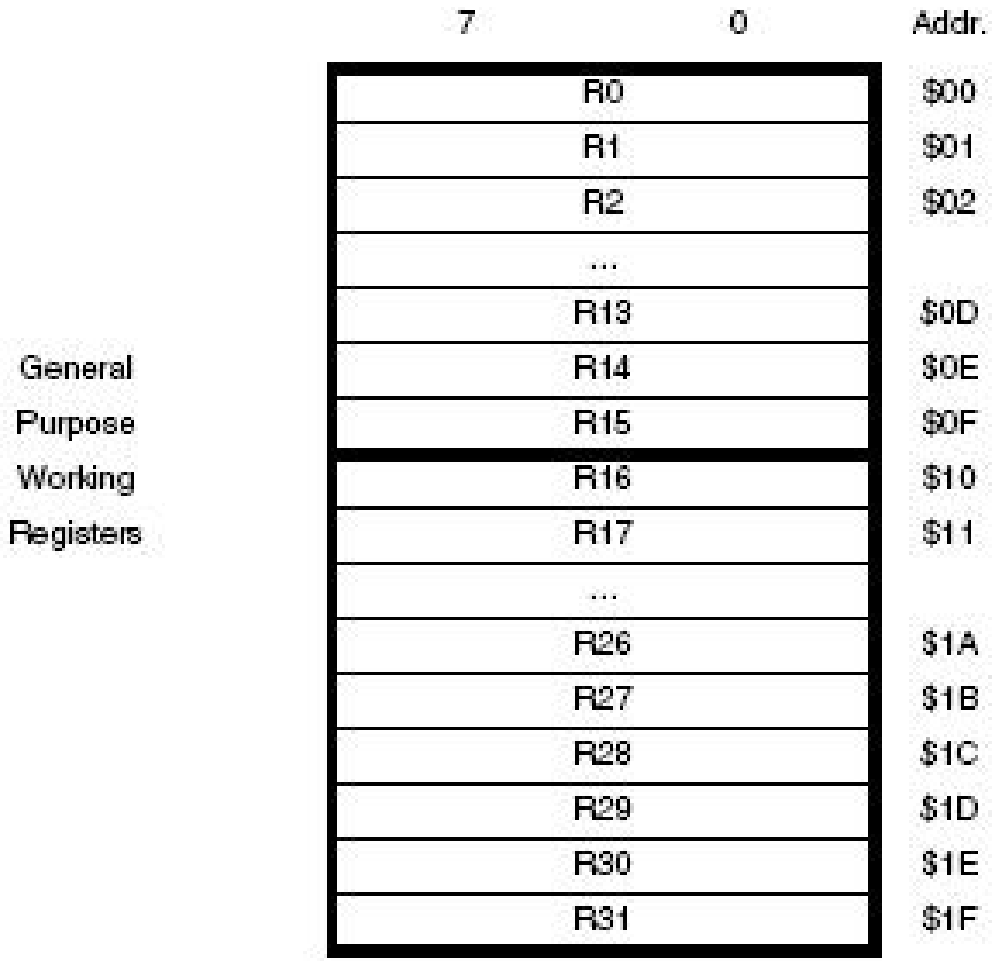
Instruktioner er koder bestående af 0'er og 1'taller !

ALU foretager beregninger.

Status register ændres ved nogle beregninger.



AVR arbejds-registre



Kaldes også: ”General Purpose Registers”

Instruktions-grupper

- Aritmetiske og logiske (”regne-instruktioner”).
- Branch (”hop-instruktioner”).
- Data transfer (”kopiering af data”).
- Bit- og bit test –instruktioner.

LDI (Load Immediate)

Description:

Loads an 8 bit constant directly to register 16 to 31.

Operation:

(i) Rd ← K

	Syntax:	Operands:	Program Counter:
(i)	LDI Rd,K	$16 \le d \le 31, 0 \le K \le 255$	PC ← PC + 1

16-bit Opcode:

1110	KKKK	dddd	KKKK

Example:

```
CLR R31          ; Clear Z high byte
LDI R30,0xF0     ; Set Z low byte to $F0
LPM              ; Load constant from Program
                 ; memory pointed to by Z
```

AARHUS UNIVERSITY
SCHOOL OF ENGINEERING

CLR (Clear register)

Description:

Clears a register. This instruction performs an Exclusive OR between a register and itself. This will clear all bits in the register.

Operation:

(i) Rd ← Rd ⊕ Rd

	Syntax:	Operands:
(i)	CLR Rd	0 ≤ d ≤ 31

Program Counter:

PC ← PC + 1

16-bit Opcode: (see EOR Rd,Rd)

0010	01dd	dddd	dddd

Example:

```
        CLR   R18        ; clear r18
LOOP:   INC   R18        ; increase r18
        ...
        CPI   R18,0x50   ; Compare r18 to $50
        BRNE  LOOP
```

AARHUS UNIVERSITY
SCHOOL OF ENGINEERING

SER (Set all bits in register)

Description:

Loads $FF directly to register Rd.

Operation:

(i) Rd ← $FF

	Syntax:	Operands:	Program Counter:
(i)	SER Rd	16 ≤ d ≤ 31	PC ← PC + 1

16-bit Opcode:

1110	1111	dddd	1111

Example:

```
CLR   R16         ; Clear r16
SER   R17         ; Set r17
OUT   PORTB,R16   ; Write zeros to Port B
NOP               ; Delay (do nothing)
OUT   PORTB,R17   ; Write ones to Port B
```

MOV (Copy Register)

Description:

This instruction makes a copy of one register into another. The source register Rr is left unchanged, while the destination register Rd is loaded with a copy of Rr.

Operation:

(i) Rd ← Rr

	Syntax:	Operands:	Program Counter:
(i)	MOV Rd,Rr	$0 \le d \le 31, 0 \le r \le 31$	PC ← PC + 1

16-bit Opcode:

0010	11rd	dddd	rrrr

Example:

```
        MOV  R16,R0      ; Copy r0 to r16
        CALL CHECK       ; Call subroutine
        ...
CHECK:  CPI R16,0x11     ; Compare r16 to $11
        ...
        RET              ; Return from subroutine
```

COM (Ones Complement)

Description:

This instruction performs a One's Complement of register Rd.

Operation:

(i) Rd ← $FF - Rd

	Syntax:	Operands:
(i)	COM Rd	0 ≤ d ≤ 31

Program Counter:

PC ← PC + 1

16-bit Opcode:

1001	010d	dddd	0000

Example:

```
        COM R4          ; Take one's complement of r4
        BREQ ZERO       ; Branch if zero
        ...
ZERO:   NOP             ; Branch destination (do nothing)
```

ADD (Add without Carry)

Description:

Adds two registers without the C Flag and places the result in the destination register Rd.

Operation:

(i) Rd ← Rd + Rr

	Syntax:	Operands:	Program Counter:
(i)	ADD Rd,Rr	$0 \le d \le 31, 0 \le r \le 31$	PC ← PC + 1

16-bit Opcode:

0000	11rd	dddd	rrrr

Example:

```
ADD R1,R2      ; Add r2 to r1 (r1=r1+r2)
ADD R28,R28    ; Add r28 to itself (r28=r28+r28)
```

SUB (Subtract without Carry)

Description:

Subtracts two registers and places the result in the destination register Rd.

Operation:

(i) Rd ← Rd - Rr

	Syntax:	Operands:	Program Counter:
(i)	SUB Rd,Rr	$0 \le d \le 31, 0 \le r \le 31$	PC ← PC + 1

16-bit Opcode:

0001	10rd	dddd	rrrr

Example:

```
        SUB   R13,R12      ; Subtract r12 from r13
        BRNE  NOTEQ        ; Branch if r12<>r13
        ...
NOTEQ:  NOP                ; Branch destination (do nothing)
```

INC (Increment)

Description:

Adds one -1- to the contents of register Rd and places the result in the destination register Rd.

The C Flag in SREG is not affected by the operation, thus allowing the INC instruction to be used on a loop counter in multiple-precision computations.

When operating on unsigned numbers, only BREQ and BRNE branches can be expected to perform consistently. When operating on two's complement values, all signed branches are available.

Operation:

(i) Rd ← Rd + 1

	Syntax:	Operands:
(i)	INC Rd	0 ≤ d ≤ 31

Program Counter:

PC ← PC + 1

16-bit Opcode:

1001	010d	dddd	0011

Example:

```
        CLR   R22          ; clear r22
LOOP:   INC   R22          ; increment r22
        CPI   R22,0x4F     ; Compare r22 to $4f
        BRNE  LOOP         ; Branch if not equal
        NOP                ; Continue (do nothing)
```

DEC (Decrement)

Description:

Subtracts one -1- from the contents of register Rd and places the result in the destination register Rd.

The C Flag in SREG is not affected by the operation, thus allowing the DEC instruction to be used on a loop counter in multiple-precision computations.

When operating on unsigned values, only BREQ and BRNE branches can be expected to perform consistently. When operating on two's complement values, all signed branches are available.

Operation:

(i) Rd ← Rd - 1

	Syntax:	Operands:
(i)	DEC Rd	$0 \le d \le 31$

Program Counter:

PC ← PC + 1

16-bit Opcode:

1001	010d	dddd	1010

Example:

```
        LDI   R17,16    ; Load constant in r17
LOOP:   ADD   R1,R2     ; Add r2 to r1
        DEC   R17       ; Decrement r17
        BRNE  LOOP      ; Branch if r17<>0
        NOP             ; Continue (do nothing)
```

Test (”socrative.com”: Room = MSYS)

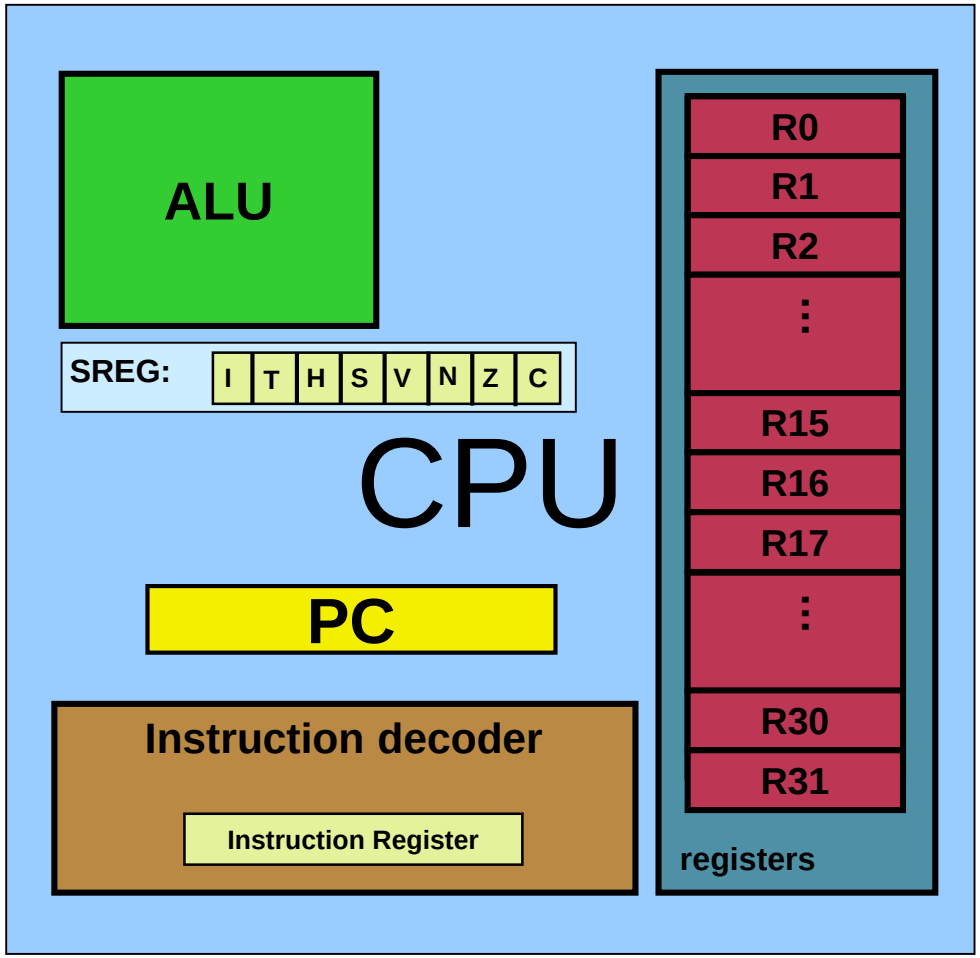
- Hvilket tal er i R20 efter følgende:

```
SER R20
LDI R19,2
LDI R20,200
ADD R20,R19
INC R20
INC R20
```

A: 200
B: 202
C: 203
D: 204

AVR's CPU

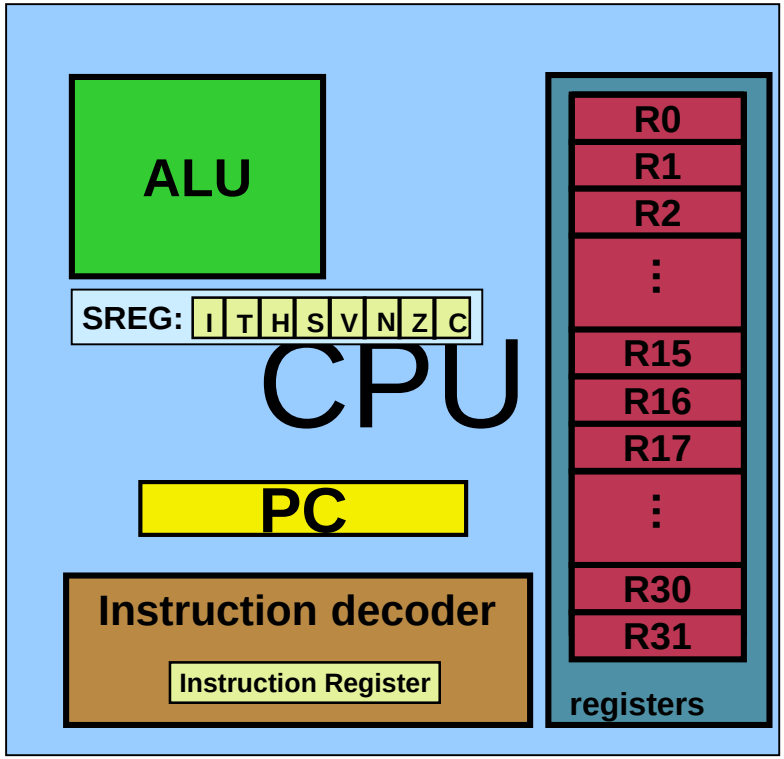
- AVR's CPU
  - ALU
  - 32 General Purpose registers (R0 to R31)
  - PC register
  - Instruction decoder



A simple program

- Write a program that calculates 19 + 95

```
LDI R16, 19     ;R16 = 19
LDI R20, 95     ;R20 = 95
ADD R16, R20    ;R16 = R16 + R20
```



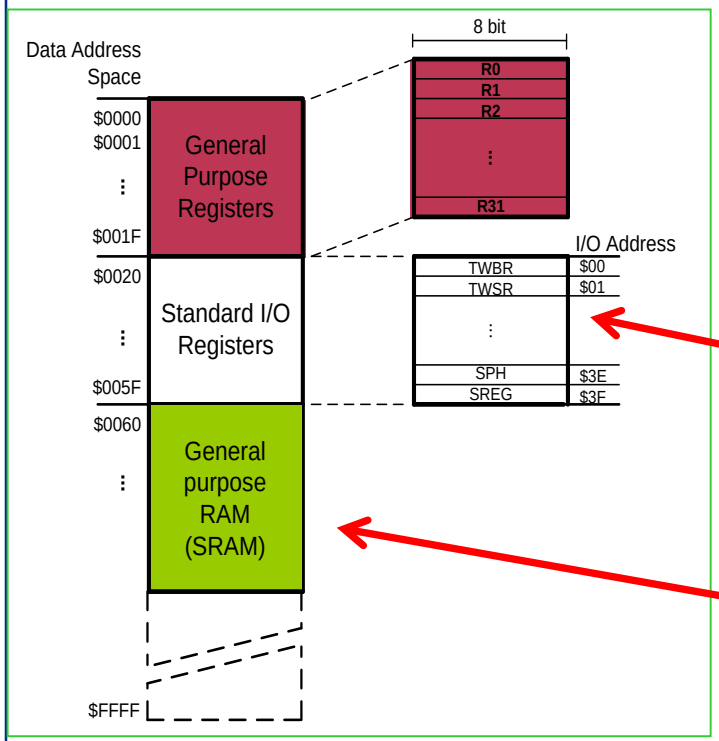
A simple program

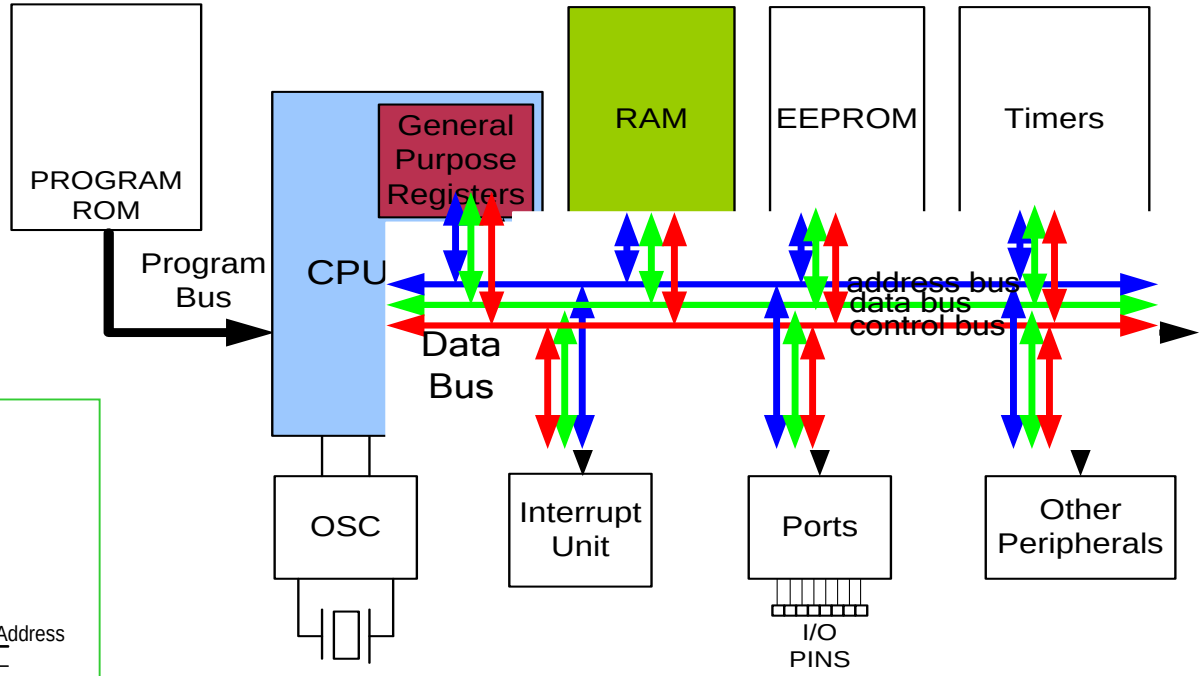
- Write a program that calculates 19 + 95 + 5

```
LDI     R16, 19         ;R16 = 19
LDI     R20, 95         ;R20 = 95
LDI     R21, 5          ;R21 = 5
ADD     R16, R20        ;R16 = R16 + R20
ADD     R16, R21        ;R16 = R16 + R21
```

```
LDI     R16, 19         ;R16 = 19
LDI     R20, 95         ;R20 = 95
ADD     R16, R20        ;R16 = R16 + R20
LDI     R20, 5          ;R20 = 5
ADD     R16, R20        ;R16 = R16 + R20
```

Data Address Space (Mega32)



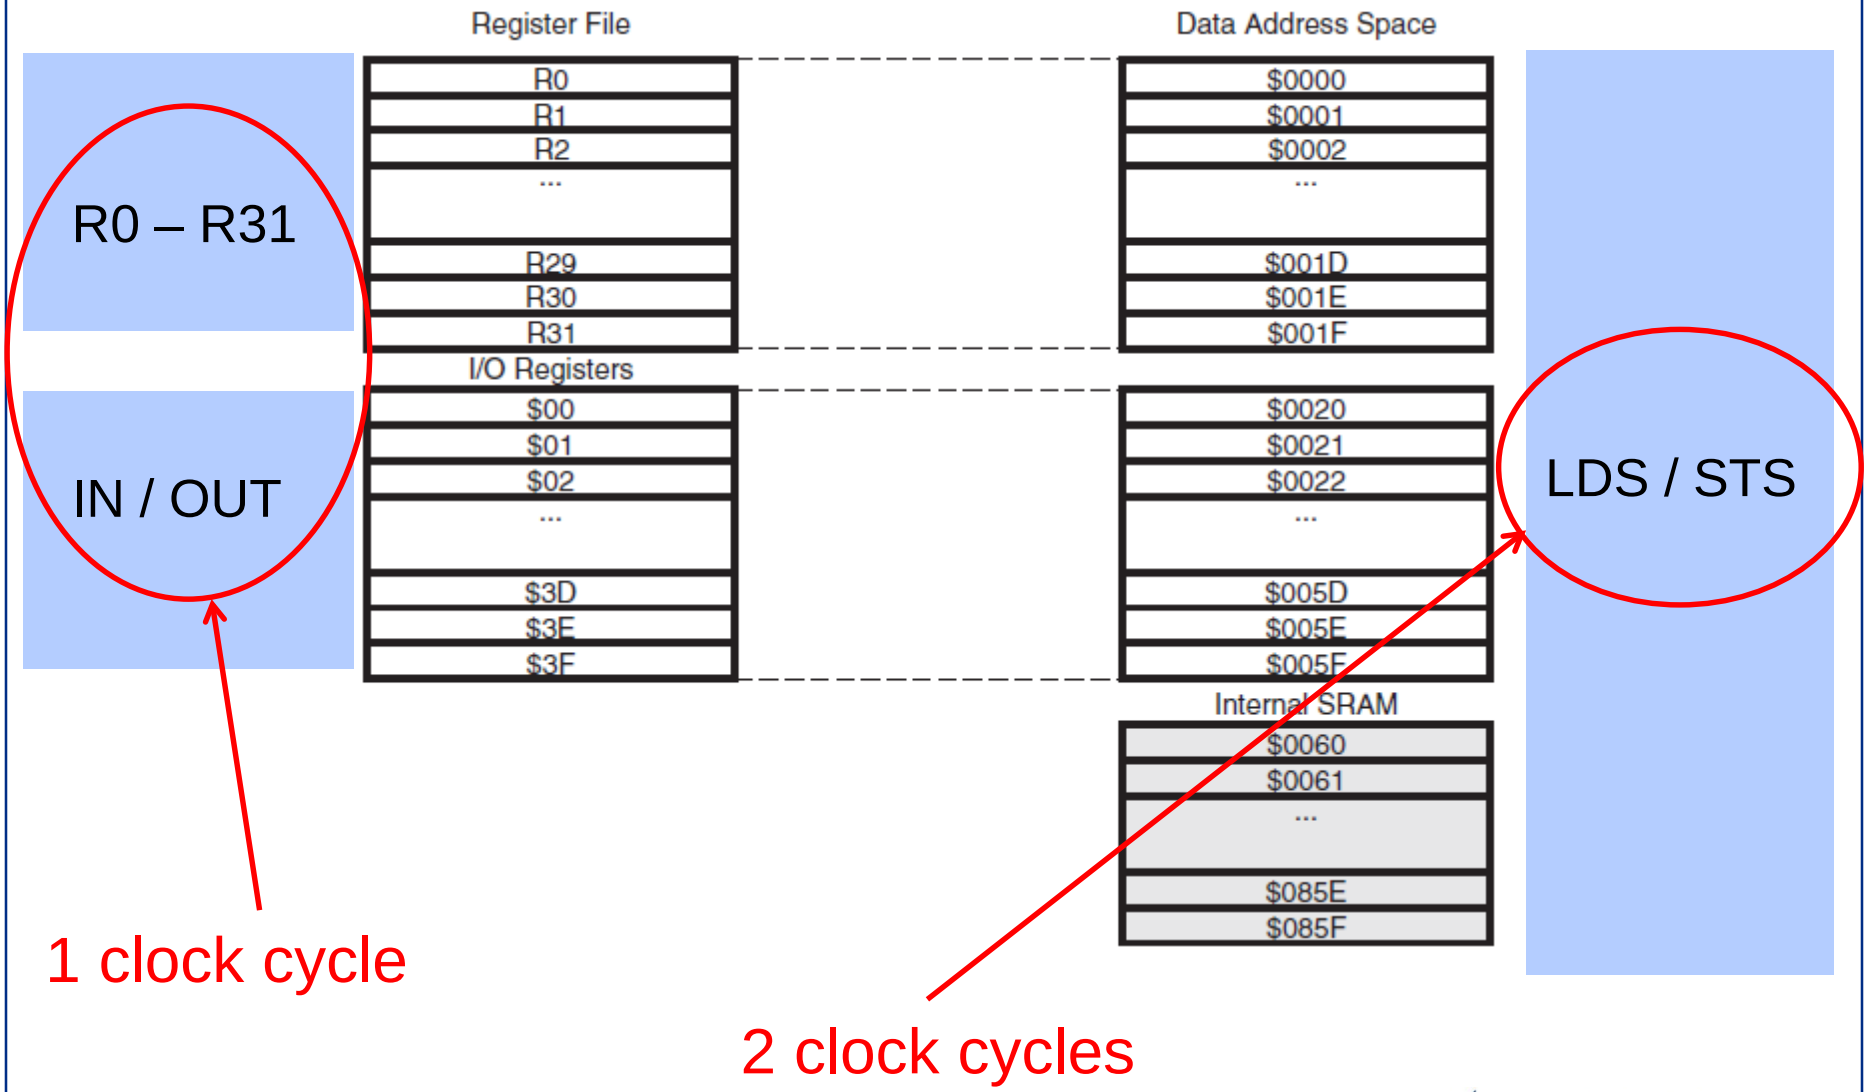


IN and OUT

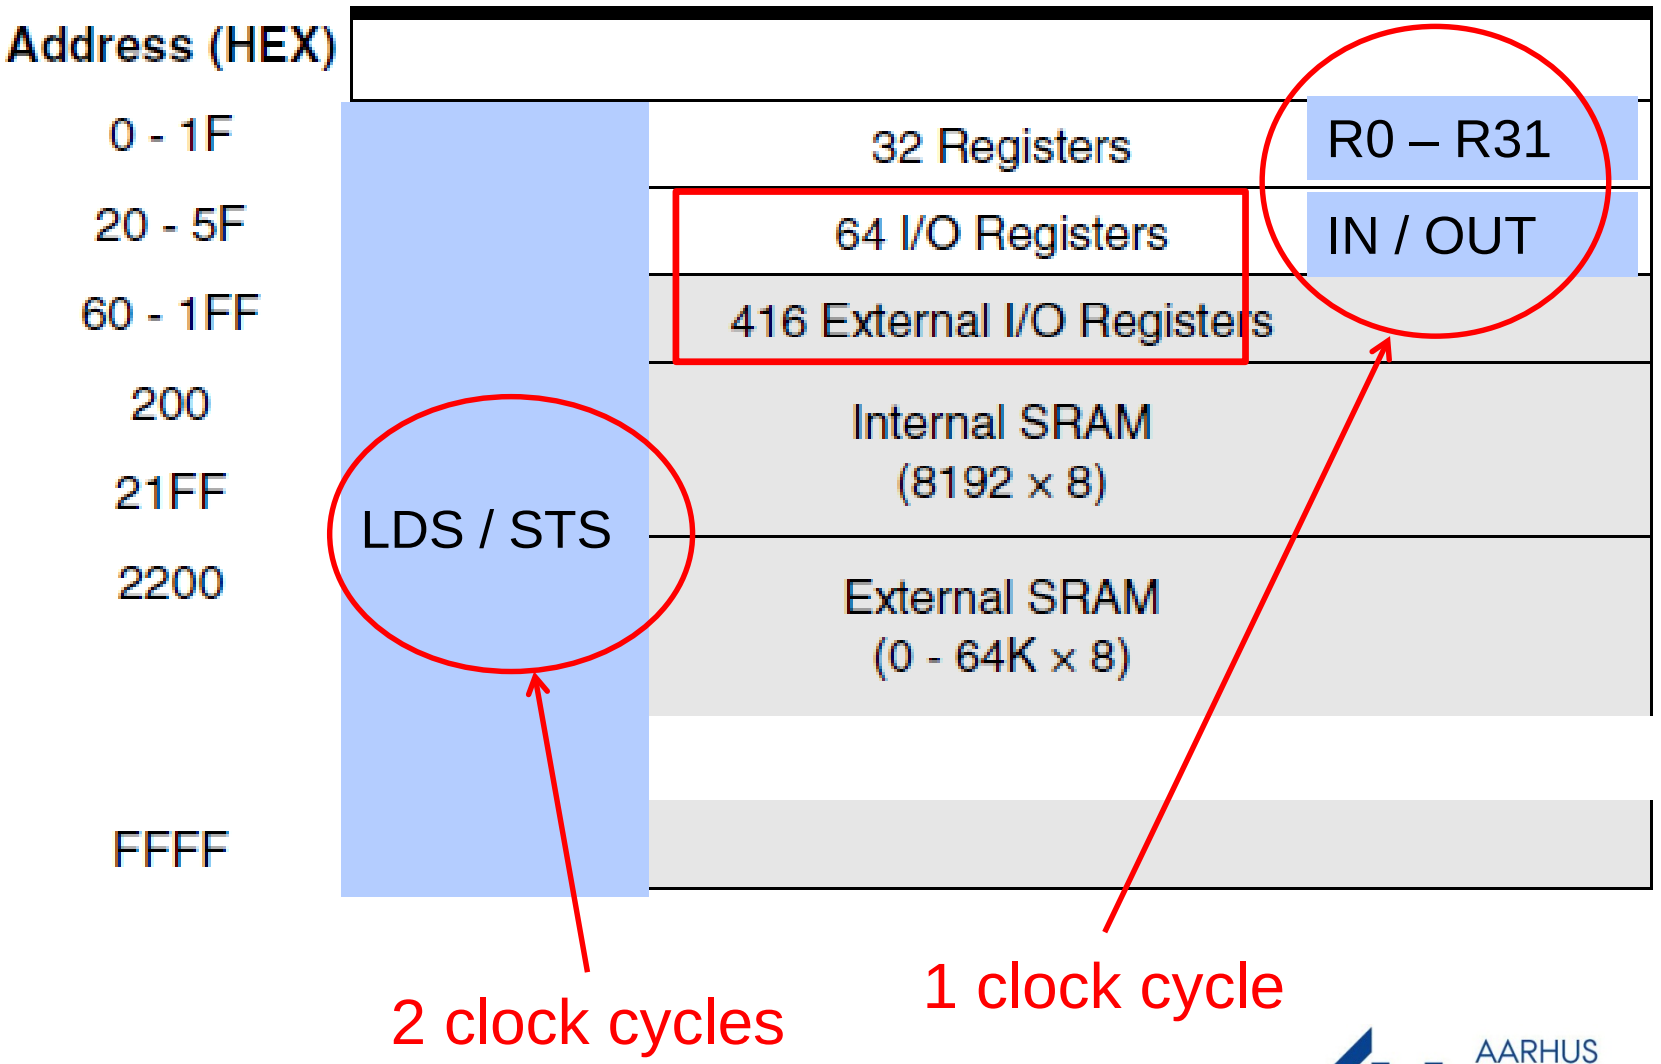
LDS and STS

AARHUS UNIVERSITY
SCHOOL OF ENGINEERING

Mega32 data memory



Mega2560 data memory



LDS (Load Direct from Data Space)

Description:

Loads one byte from the data space to a register. For parts with SRAM, the data space consists of the Register File, I/O memory and internal SRAM (and external SRAM if applicable). For parts without SRAM, the data space consists of the register file only. The EEPROM has a separate address space.

A 16-bit address must be supplied. Memory access is limited to the current data segment of 64K bytes. The LDS instruction uses the RAMPD Register to access memory above 64K bytes. To access another data segment in devices with more than 64K bytes data space, the RAMPD in register in the I/O area has to be changed.

This instruction is not available in all devices. Refer to the device specific instruction set summary.

Operation:

(i) Rd ← (k)

	Syntax:	Operands:	Program Counter:
(i)	LDS Rd,k	$0 \le d \le 31, 0 \le k \le 65535$	PC ← PC + 2

32-bit Opcode:

1001	000d	dddd	0000
kkkk	kkkk	kkkk	kkkk

Example:

```
LDS R2,0xFF00    ; Load r2 with the contents of data space location $FF00
ADD R2,R1        ; add r1 to r2
STS 0xFF00,R2    ; Write back
```

AARHUS UNIVERSITY
SCHOOL OF ENGINEERING

STS (Store Direct to Data Space)

Description:

Stores one byte from a Register to the data space. For parts with SRAM, the data space consists of the Register File, I/O memory and internal SRAM (and external SRAM if applicable). For parts without SRAM, the data space consists of the Register File only. The EEPROM has a separate address space.

A 16-bit address must be supplied. Memory access is limited to the current data segment of 64K bytes. The STS instruction uses the RAMPD Register to access memory above 64K bytes. To access another data segment in devices with more than 64K bytes data space, the RAMPD in register in the I/O area has to be changed.

This instruction is not available in all devices. Refer to the device specific instruction set summary.

Operation:

(i) (k) ← Rr

	Syntax:	Operands:	Program Counter:
(i)	STS k,Rr	0 ≤ r ≤ 31, 0 ≤ k ≤ 65535	PC ← PC + 2

32-bit Opcode:

1001	001d	dddd	0000
kkkk	kkkk	kkkk	kkkk

Example:

```
LDS R2,0xFF00     ; Load r2 with the contents of data space location $FF00
ADD R2,R1         ; add r1 to r2
STS 0xFF00,R2     ; Write back
```

IN (Load an I/O Location to Register)

Description:

Loads data from the I/O Space (Ports, Timers, Configuration Registers etc.) into register Rd in the Register File.

Operation:

(i) Rd ← I/O(A)

	Syntax:	Operands:	Program Counter:
(i)	IN Rd,A	$0 \le d \le 31, 0 \le A \le 63$	PC ← PC + 1

16-bit Opcode:

1011	0AAd	dddd	AAAA

Example:

```
        IN   R25,PINB     ; Read Port B
        CPI  R25,4        ; Compare read value to constant
        BREQ EXIT         ; Branch if r25=4
        ...
EXIT:   NOP               ; Branch destination (do nothing)
```

OUT (Store Register to I/O Location)

Description:

Stores data from register Rr in the Register File to I/O Space (Ports, Timers, Configuration Registers etc.).

Operation:

(i) I/O(A) ← Rr

	Syntax:	Operands:
(i)	OUT A,Rr	$0 \le r \le 31, 0 \le A \le 63$

Program Counter:

PC ← PC + 1

16-bit Opcode:

1011	1AAr	rrrr	AAAA

Example:

```
CLR R16          ; Clear r16
SER R17          ; Set r17
OUT PORTB,R16    ; Write zeros to Port B
NOP              ; Wait (do nothing)
OUT PORTB,R17    ; Write ones to Port B
```

Assembler Directives .EQU (and .SET)

- .EQU *name* = *value*
  - *Example:*

```
.EQU    COUNT = 0x25
LDI     R21, COUNT              ;R21 = 0x25
LDI     R22, COUNT + 3          ;R22 = 0x28
```

- .SET *name* = *value*
  - *Example:*

```
.SET    COUNT = 0x25
LDI     R21, COUNT              ;R21 = 0x25
LDI     R22, COUNT + 3          ;R22 = 0x28
.SET    COUNT = 0x19
LDI     R21, COUNT              ;R21 = 0x19
```

Assembler Directives .INCLUDE

- .INCLUDE "*filename.ext*"

Table 2-6: Some of the common AVRs and their include files
