Microcontroller Systems

Lektion 17: Seriel kommunikation

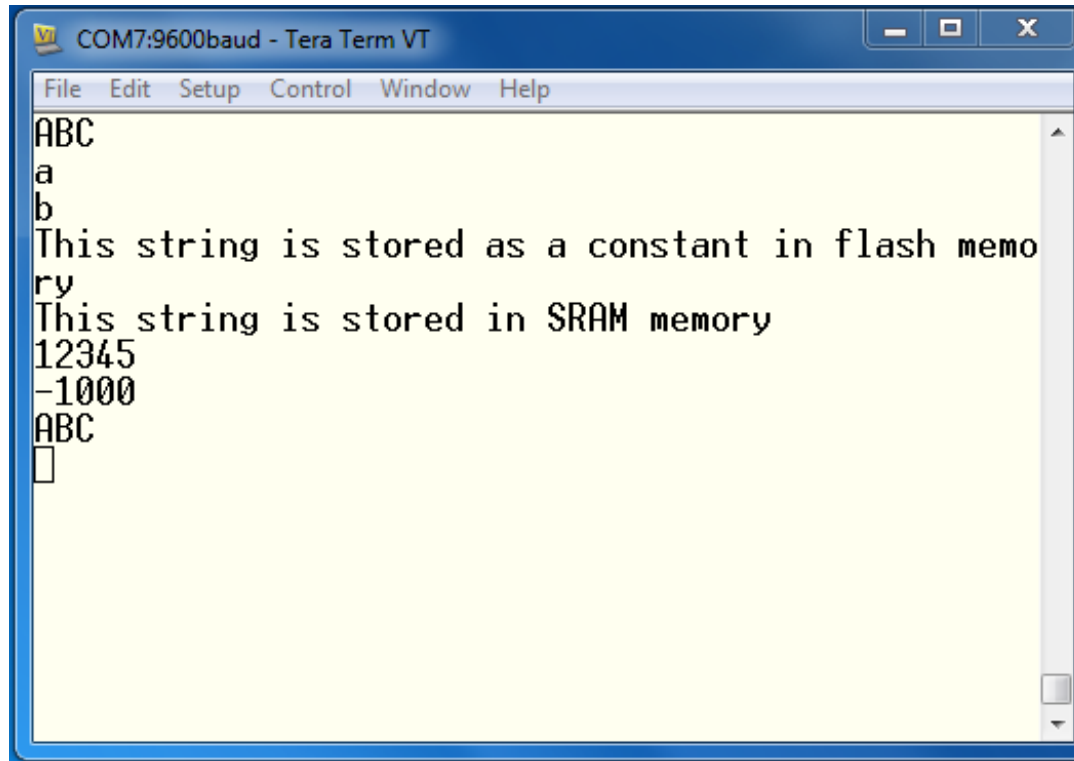

Serial communication

- Til udveksling af data mellem 2 systemer (f.eks. mellem en PC og en microcontroller) anvendes ofte **seriel kommunikation**.
- Hvert system må have en HW-enhed, der kaldes en **UART**.
- Mega32 har 1 indbygget UART.
- Mega2560 har 4 indbyggede UART'er.

PC: "Tera Terminal"

The screenshot shows a terminal window titled "COM7:9600baud - Tera Term VT". The menu bar includes File, Edit, Setup, Control, Window, and Help. The text area displays the following received data: ABC, a, b, This string is stored as a constant in flash memory, This string is stored in SRAM memory, 12345, -1000, ABC, and a cursor. The window has a blue title bar and a yellow text area.

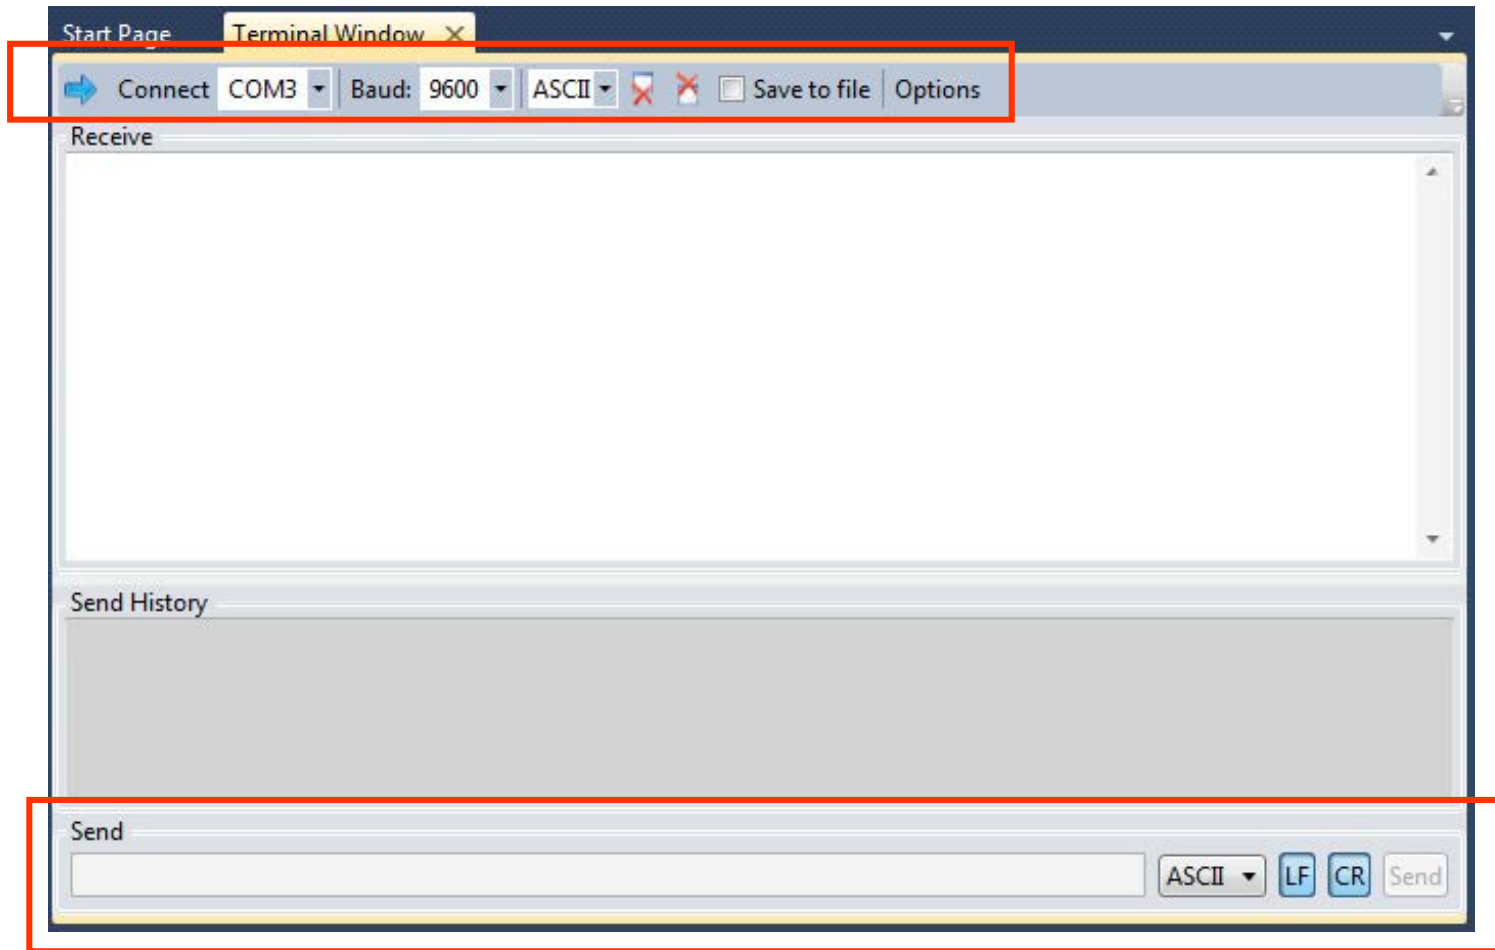

```
COM7:9600baud - Tera Term VT
File Edit Setup Control Window Help
ABC
a
b
This string is stored as a constant in flash memo
ry
This string is stored in SRAM memory
12345
-1000
ABC
□
```

På **PC'en** startes et **terminalprogram** (f.eks. det gratis program "Tera Terminal").

Når vi **trykker en tast på PC tastaturet**, sendes tegnets ASCII-kode ud på COM-porten.

Hvis PC'ens COM-port **modtager et tegn, vises det** i vinduet.

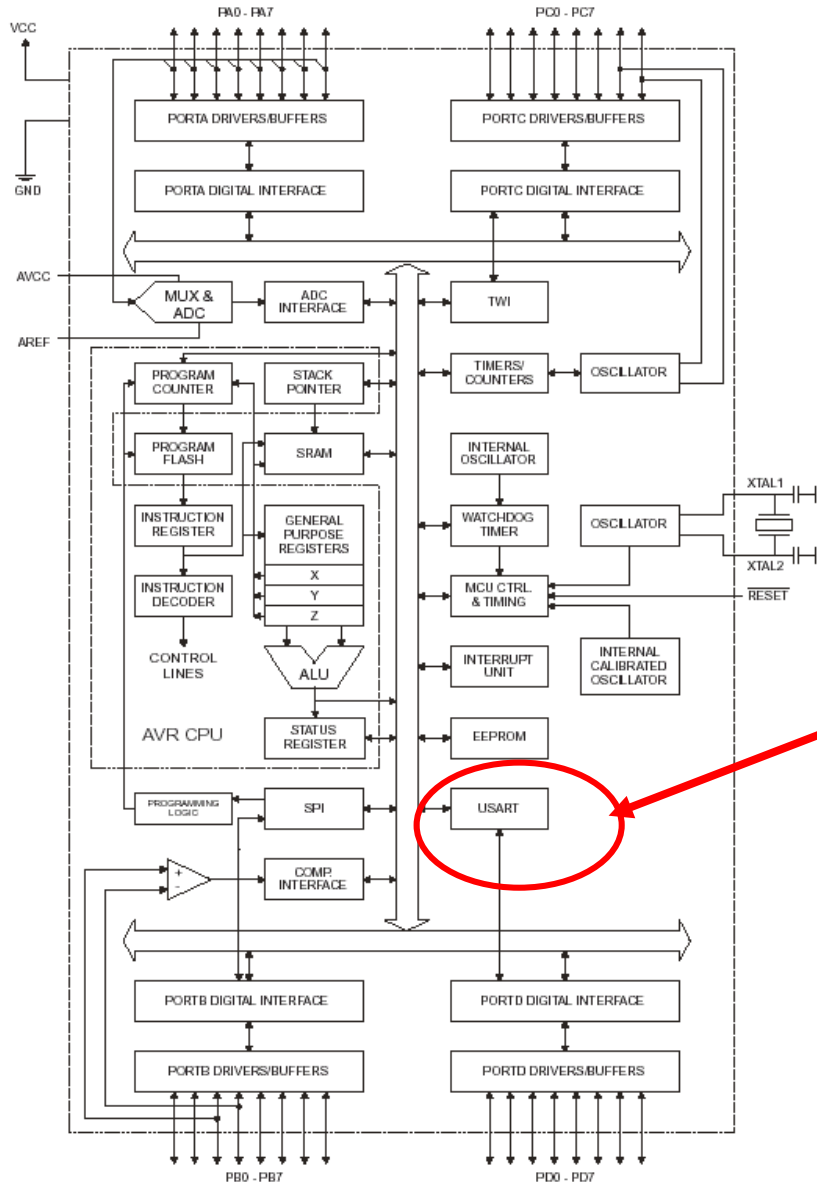

Atmel Studios "Terminal Vindue"

Kun tilgængelig efter installering af denne extension. Setup-fil på MSYS Blackboard.

Detaljeret blokdiagram

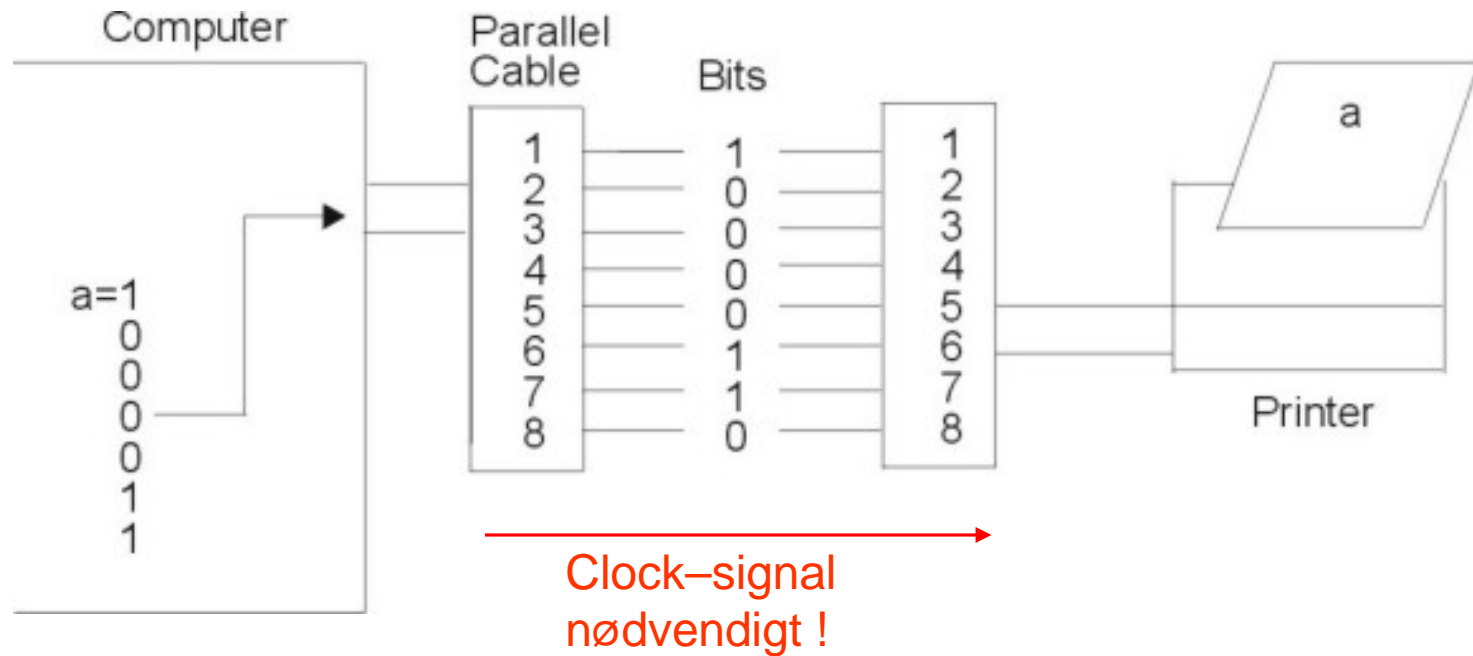

Figure 2. Block Diagram

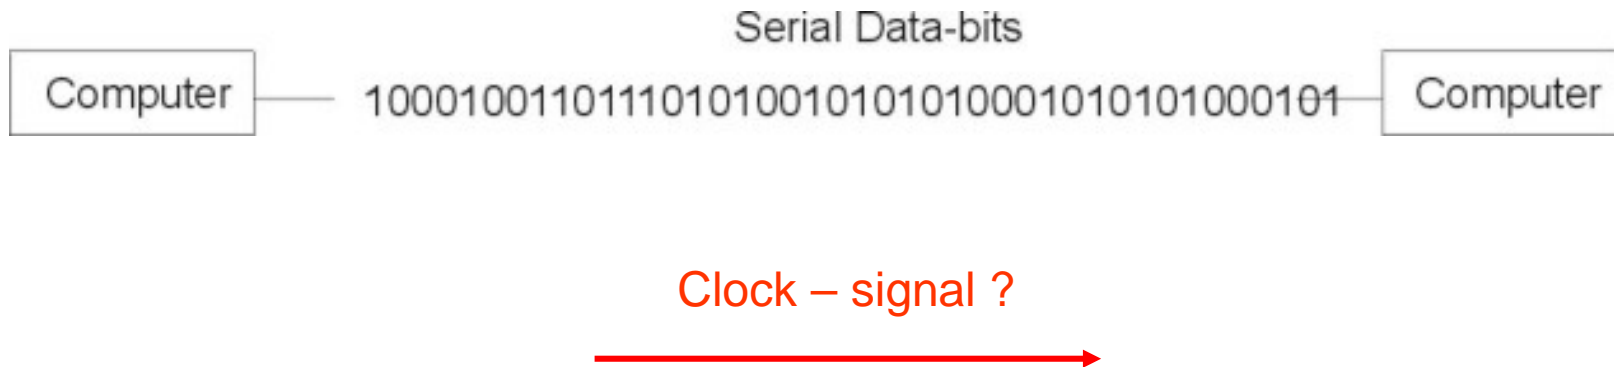

Se det blå hæfte !

USART

Parallel kommunikation

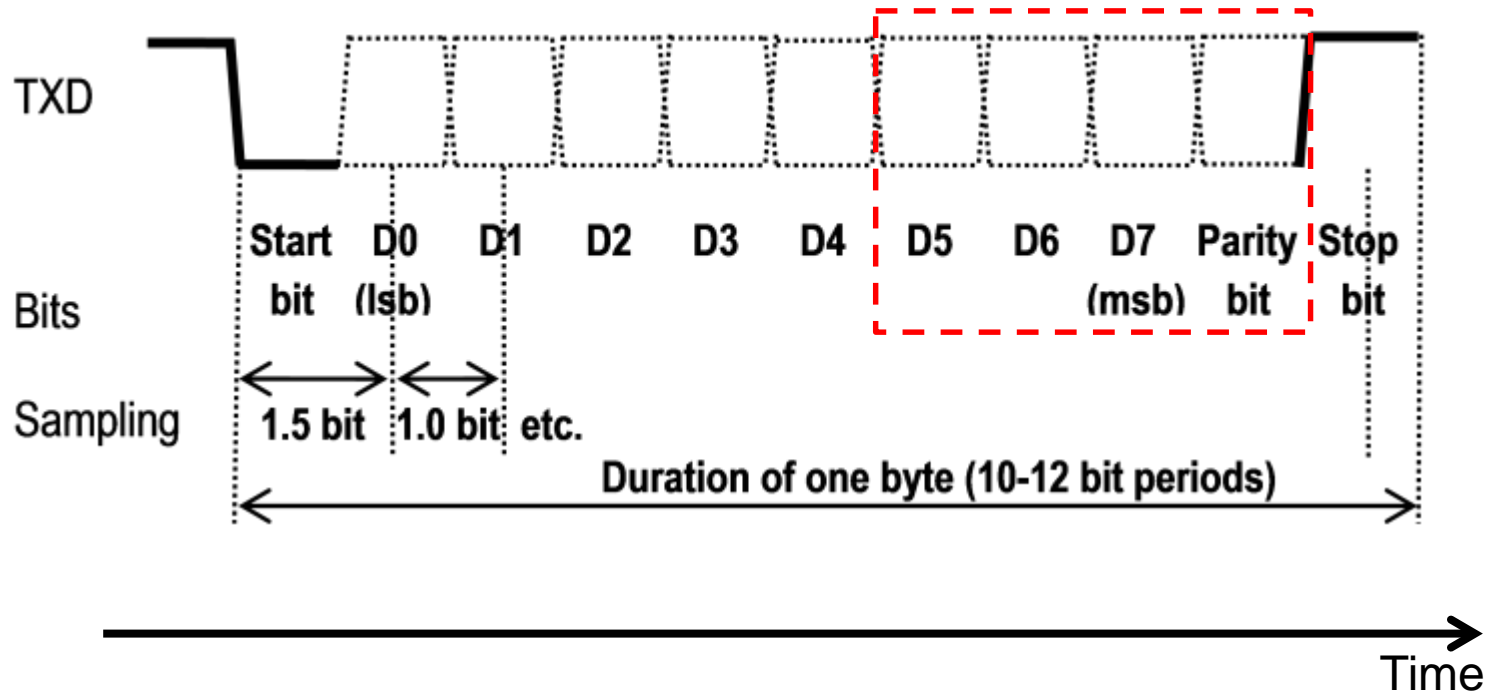

Serial kommunikation

Der er to problemer :

- * Bit -synkronisering.
- * Byte ("frame") –synkronisering.

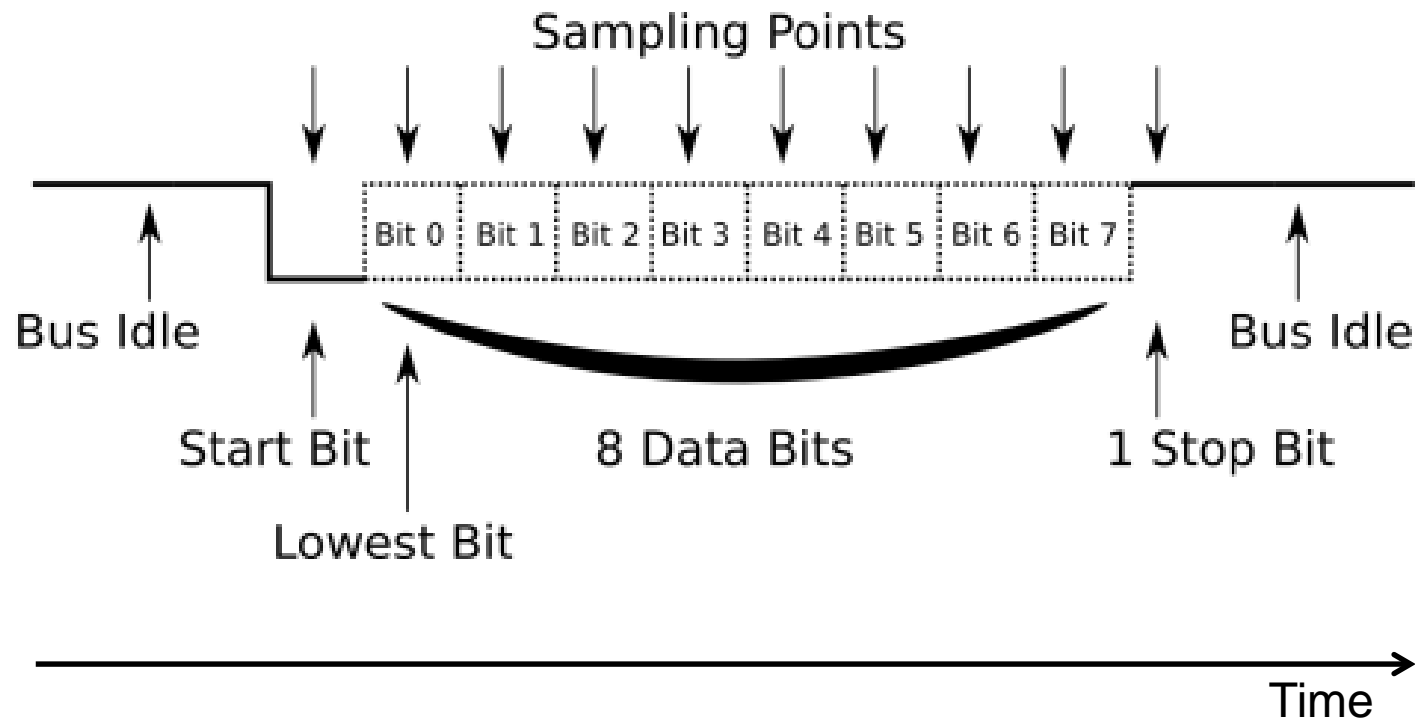

Asynkront format

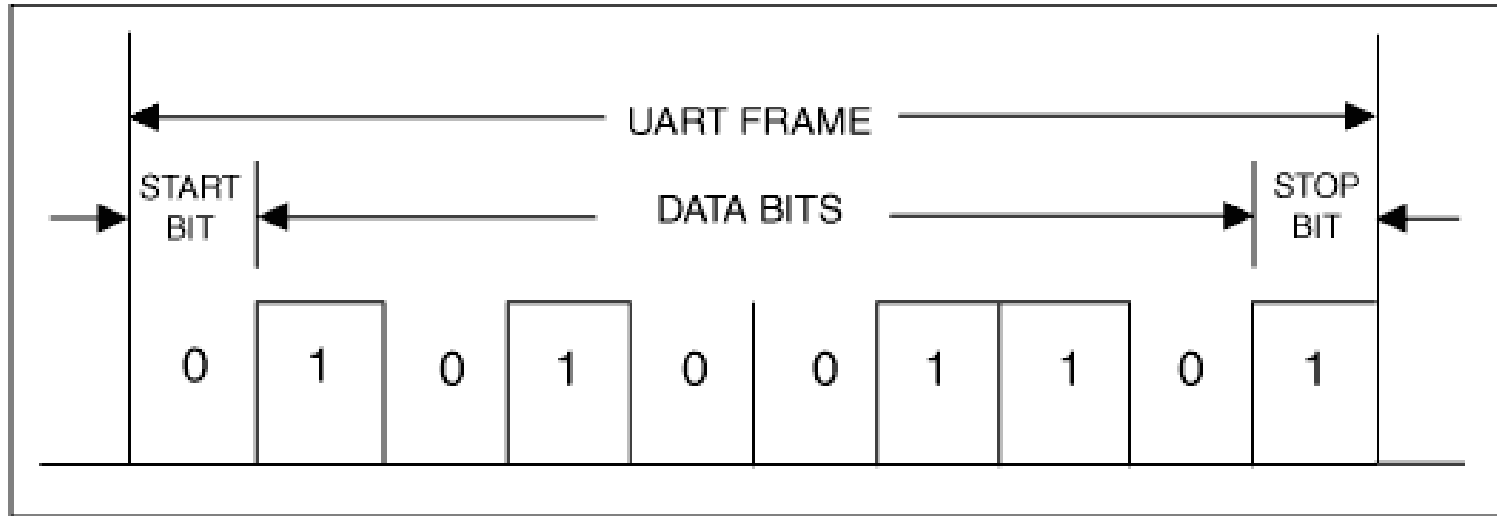

- Data's LSB bliver sendt først
- Antal data bits = 5 – 9 (oftest 8)
- Parity bit er optionel (udelades oftest)

Asynkront format (uden paritet)

UART with 8 Databits, 1 Stopbit and **no Parity**

Eksempel

**Hvilken talværdi
sendes ?**

ASCII: "Blot" en måde at kode på

Decimal	Hexadecimal	Binary	Octal	Char	Decimal	Hexadecimal	Binary	Octal	Char	Decimal	Hexadecimal	Binary	Octal	Char

Baud Rate

- Baud Rate = **Antal bits per sekund.**
- Baud Rate = 1 / bit-tiden.
- Eksempel : 9600 Baud ~ bit-tid = 104 uS.
- Standard Baud Rates :
110, **300**, 600, **1200**, 2400, 4800
9600, 14400, **19200**
38400, 57600, **115200**

Test ("socrative.com": Room = MSYS)

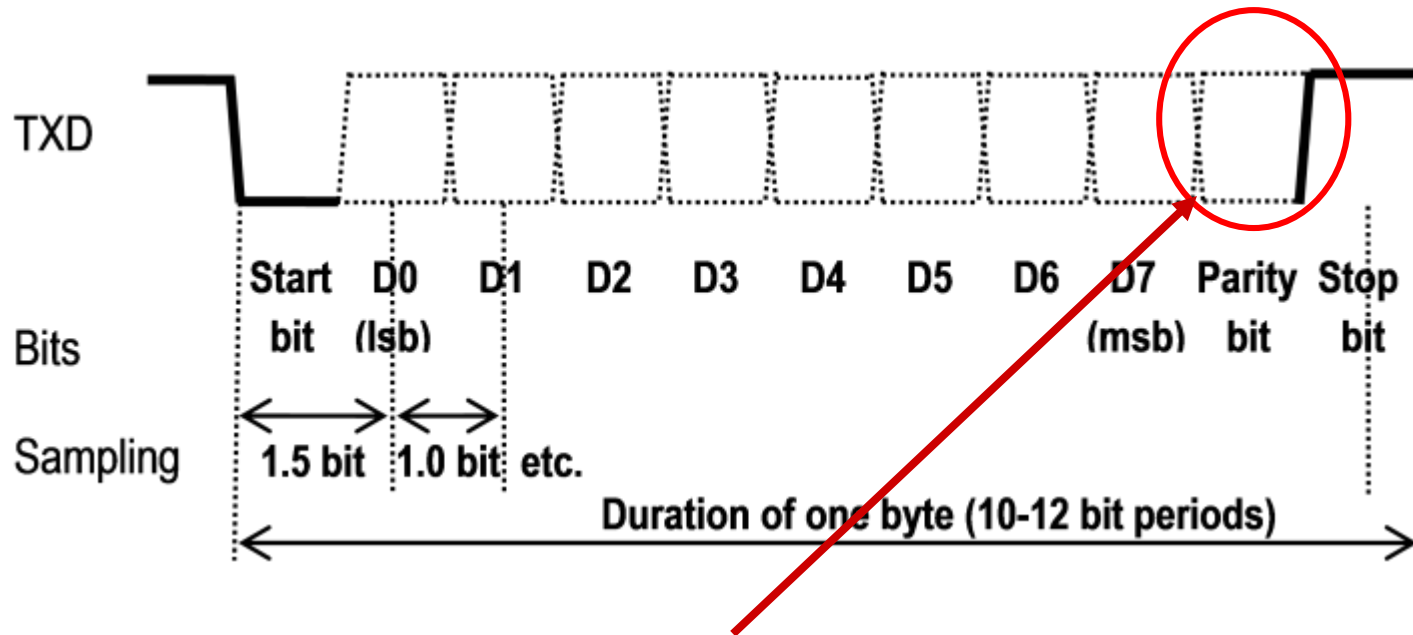

Hvor lang tid tager det at sende et tegn via en UART, når der anvendes:

- * Baud rate = 9600 bit/s
- * 1 startbit
- * 8 databit
- * Ingen paritet
- * 1 stopbit

- A: Cirka 10 ms.
- B: Cirka 100 μ s.
- C: Cirka 1 ms.
- D: Cirka 10 μ s.

Paritet

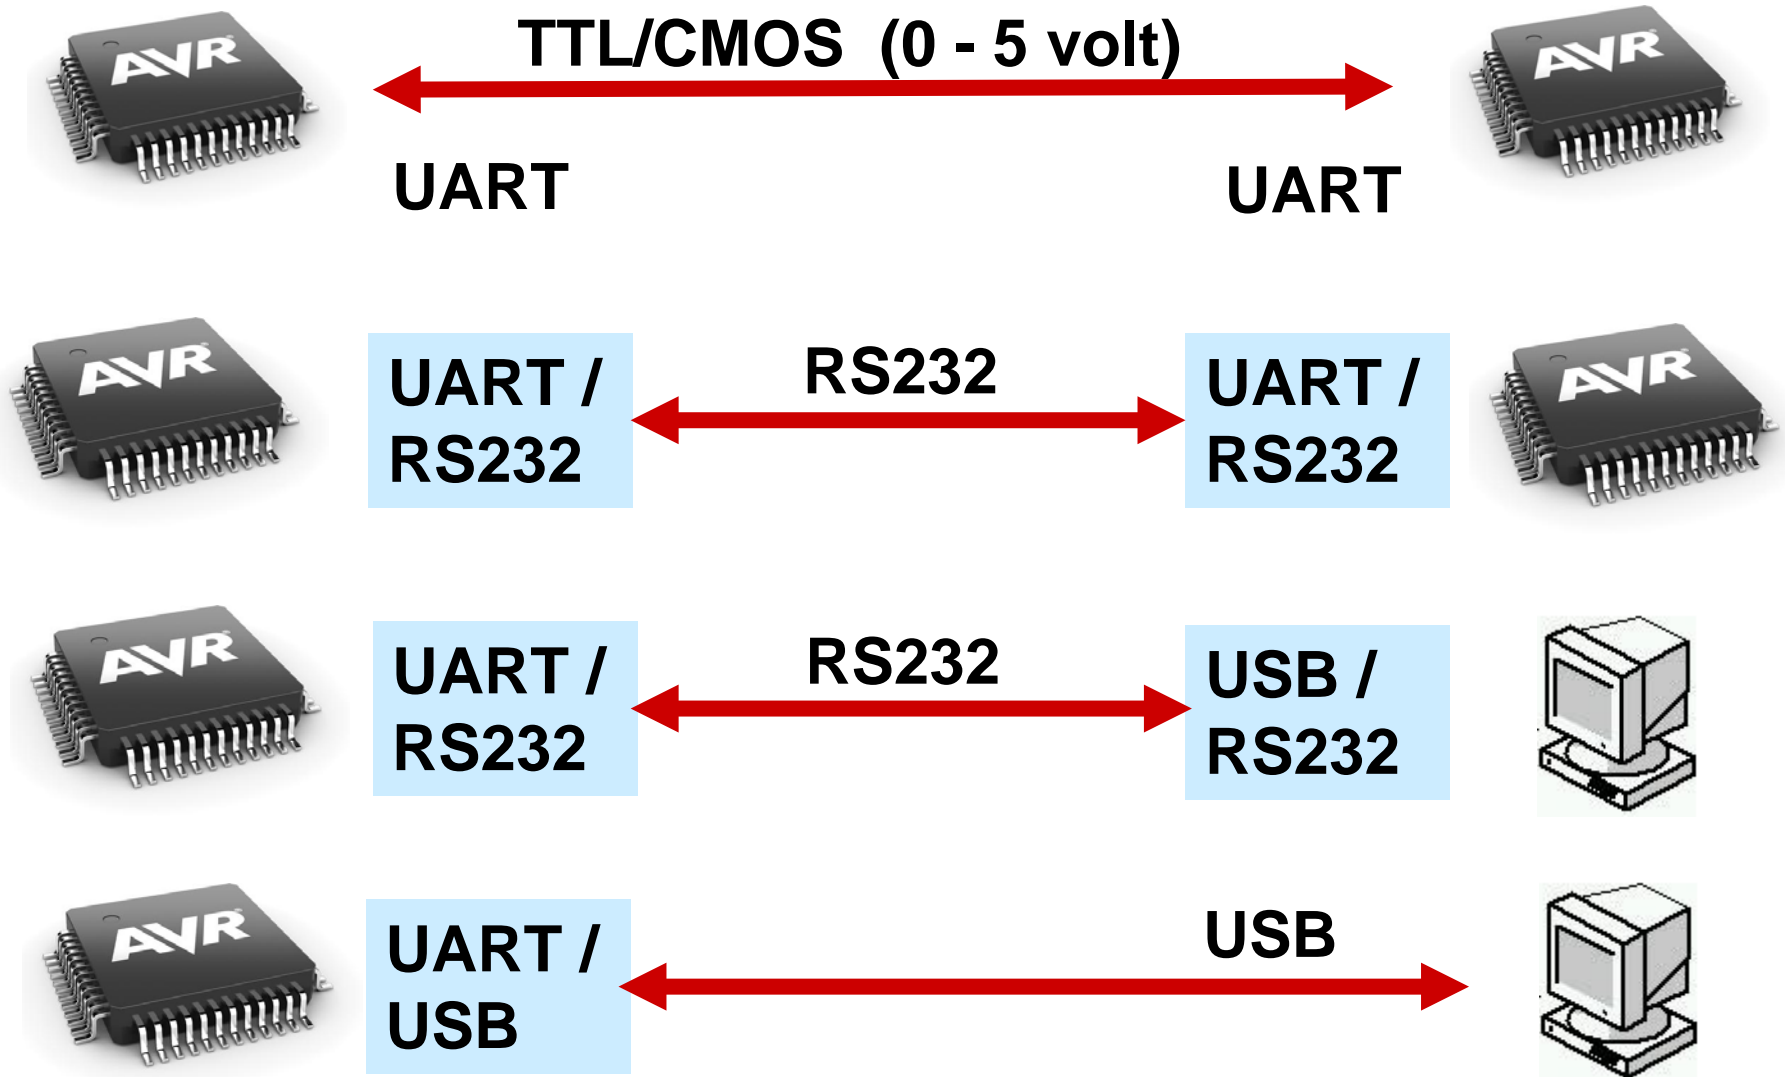

- **"Even parity"** : Antallet af 1-taller (i data og P-bit) skal være et **lige** tal.
- **"Odd parity"** : Antallet af 1-taller (i data og P-bit) skal være **ulige** tal.
- **"No parity"** anvendes oftest (ingen paritets-bit).

Simplex / duplex

Kommunikations-standarder

Ofte anvendt standard: RS232

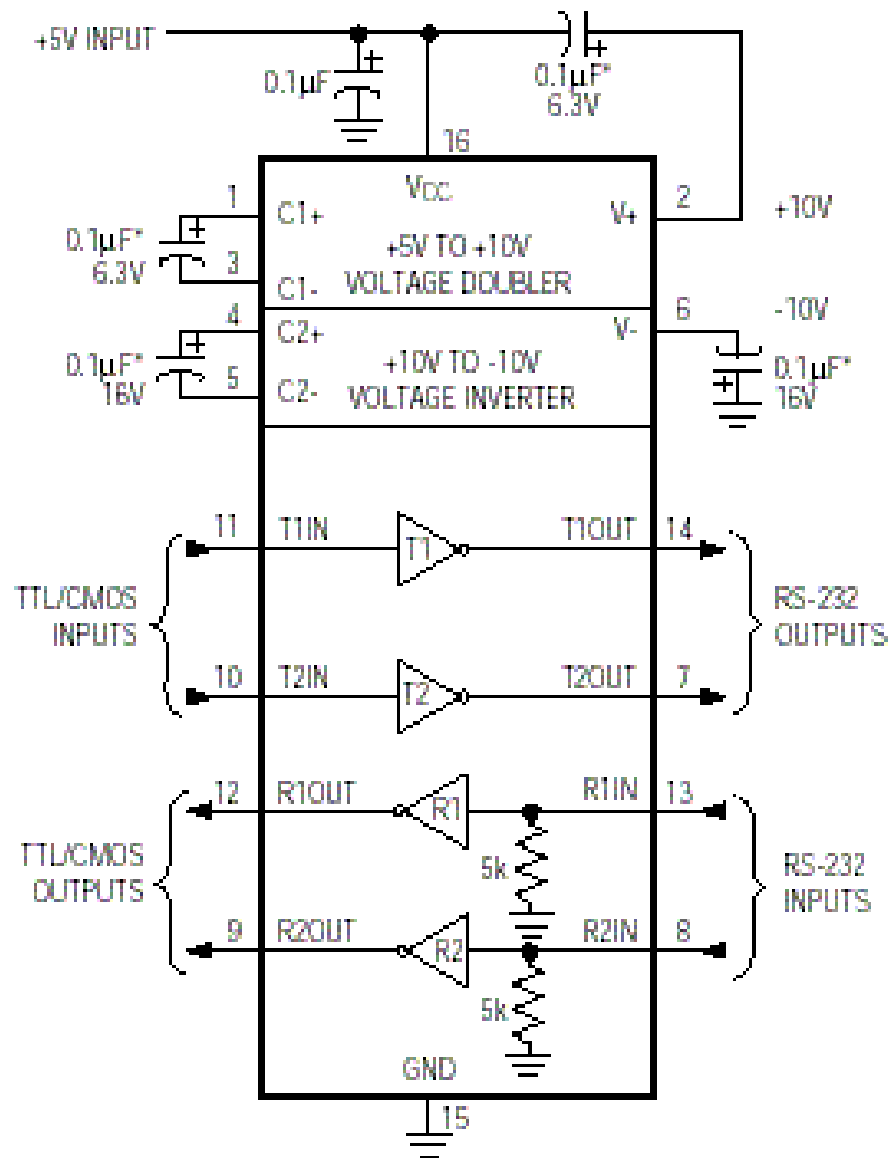

Figure 4 TTL/CMOS Serial Logic Waveform

Figure 5 RS-232 Logic Waveform

- Logisk 0 : +3 til +25 volt.
- Logisk 1 : -3 til -25 volt.

MAX232 tranceiver-kreds

Pris ~ 1-2 kroner

Eksempel med RS232 tranceivers

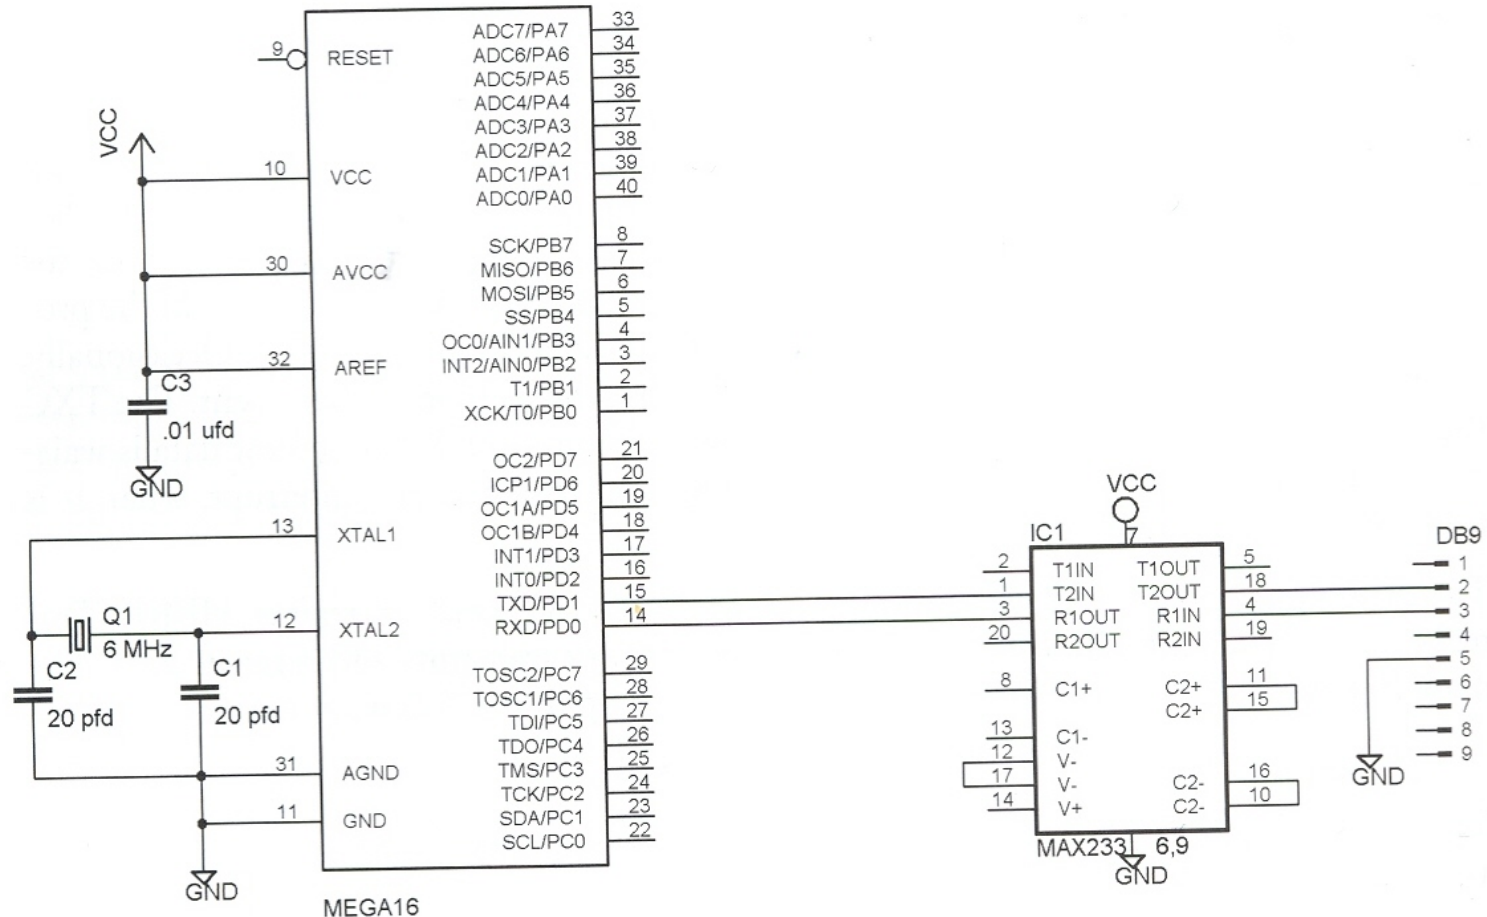

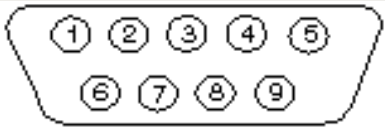

Figure 2-39 Serial Communication Example Hardware

Typisk RS232 port (COM-port)

	9 Pin Connector on a DTE device (PC connection)
Male RS232 DB9	
Pin Number	Direction of signal:
1	Carrier Detect (CD) (from DCE) Incoming signal from a modem
2	Received Data (RD) Incoming Data from a DCE
3	Transmitted Data (TD) Outgoing Data to a DCE
4	Data Terminal Ready (DTR) Outgoing handshaking signal
5	Signal Ground Common reference voltage
6	Data Set Ready (DSR) Incoming handshaking signal
7	Request To Send (RTS) Outgoing flow control signal
8	Clear To Send (CTS) Incoming flow control signal
9	Ring Indicator (RI) (from DCE) Incoming signal from a modem

De øvrige signaler KAN anvendes til "handshake".

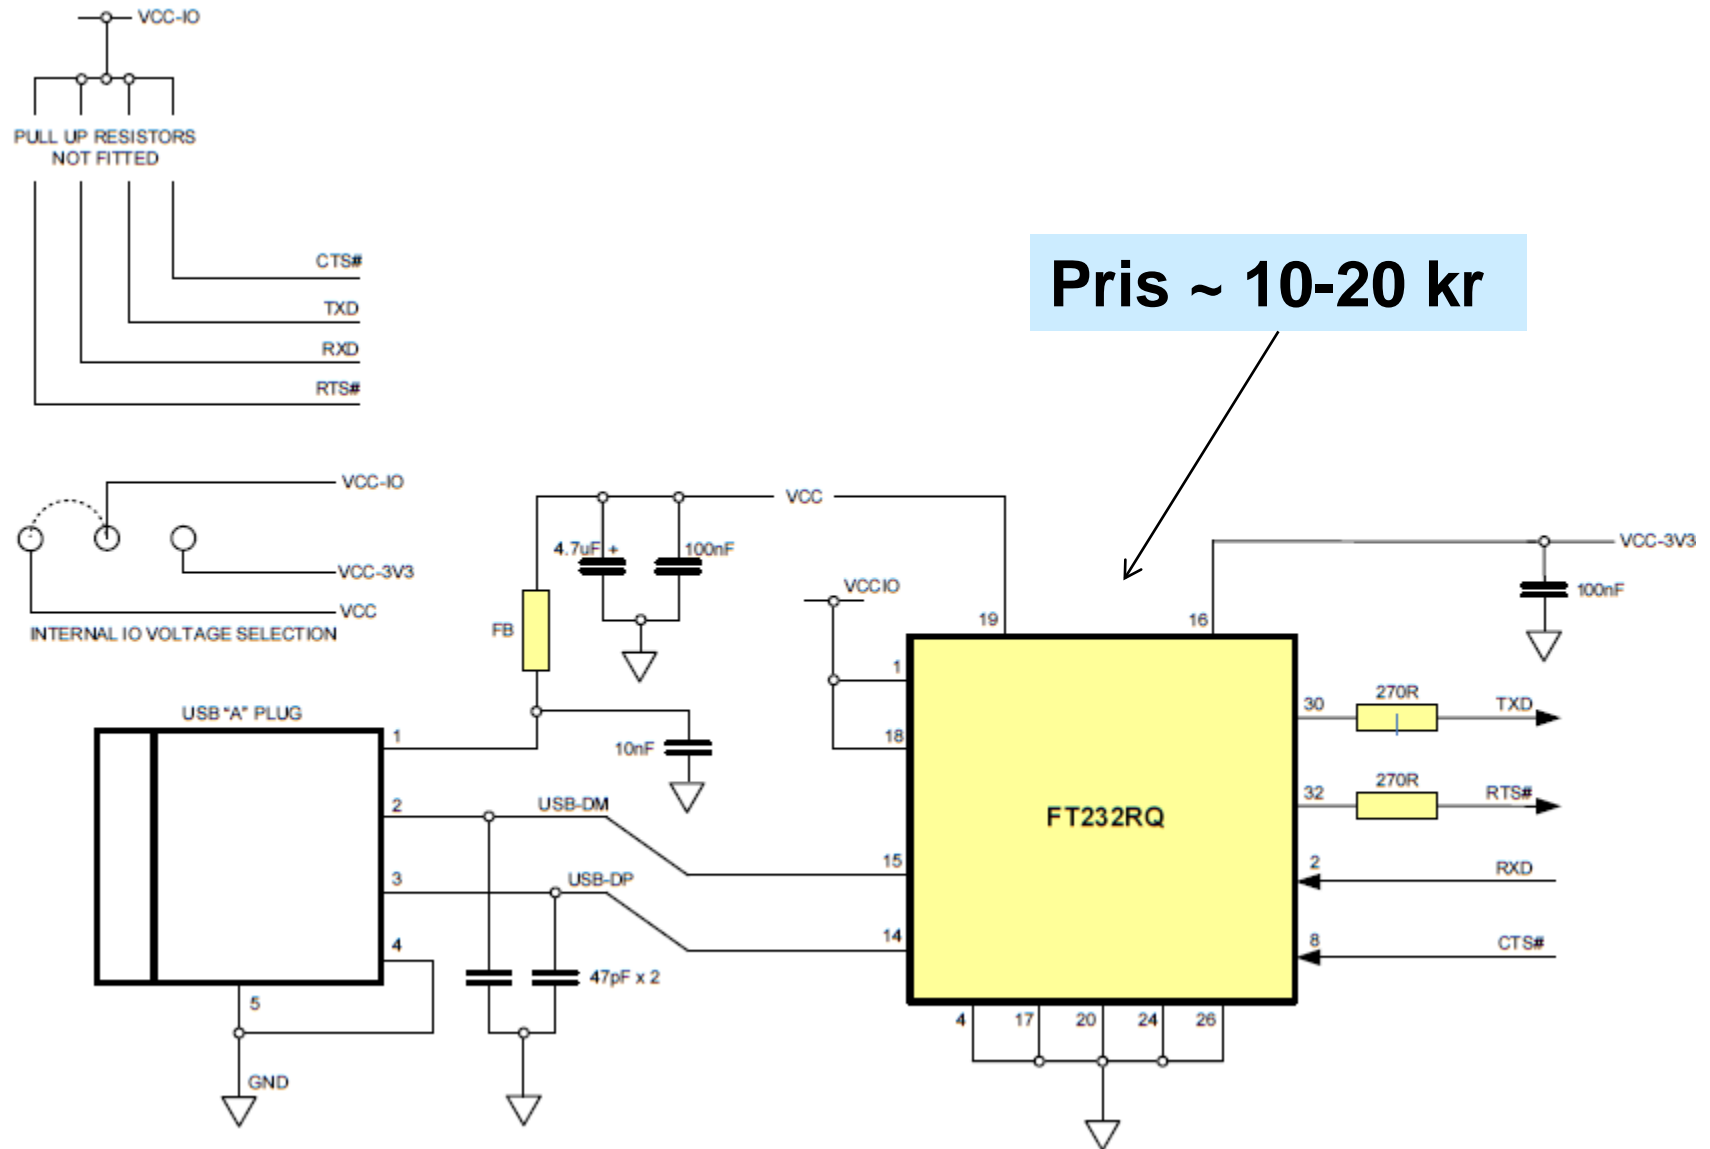

RS232 max kabellængde

Baud Rate	Shielded Cable Length	Unshielded Cable Length
110	5000	1000
300	4000	1000
1200	3000	500
2400	2000	500
4800	500	250
9600	250	100

Mega2560: 4 USART'er

Mega2560: USART pins

USART0 :

TXD0 = PE, ben 1

RXD0 = PE, ben 0

USART1 :

TXD1 = PD, ben 3

RXD1 = PD, ben 2

**Arduino Mega2560
USB - stikket**

USART2 :

TXD2 = PH, ben 1

RXD2 = PH, ben 0

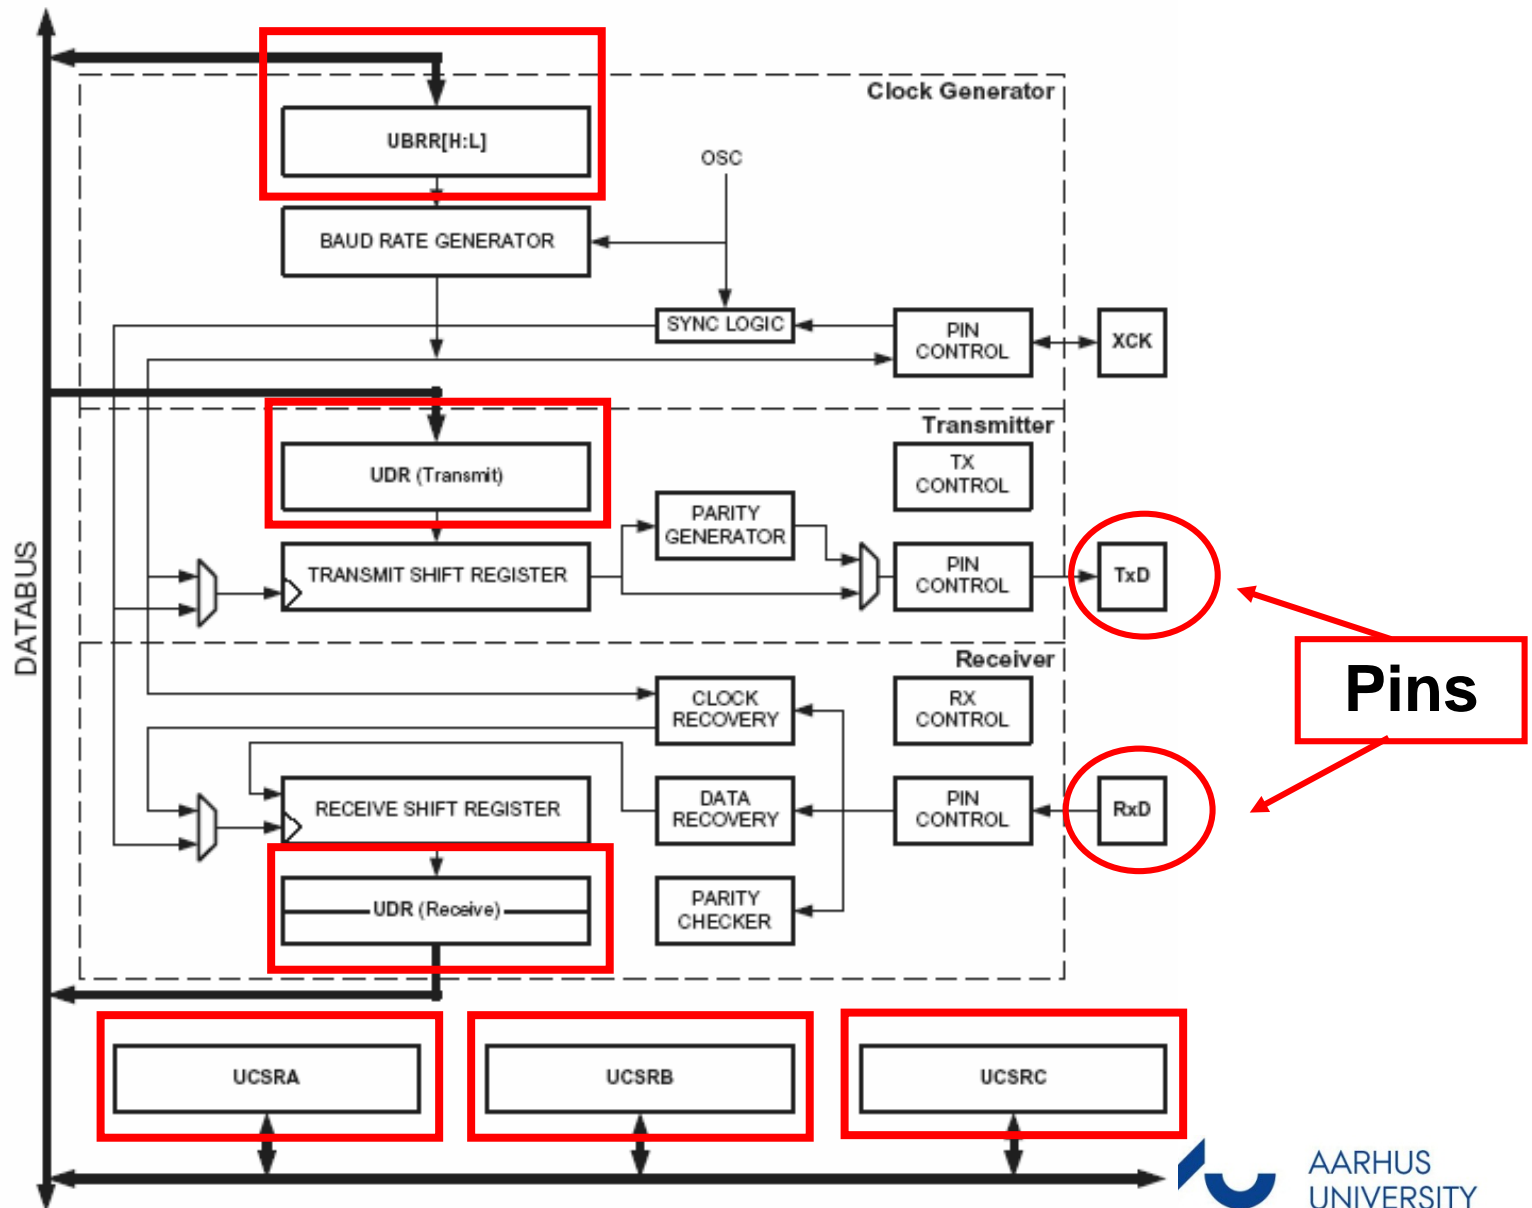

USART3 :

TXD3 = PJ, ben 1

RXD3 = PJ, ben 0

Mega32/Mega2560 USART

Mega2560: UDRn. Uuart Data Registers

UDR0, UDR1, UDR2 eller UDR3

Bemærk: Fysisk to forskellige registre med samme navn (UDRn)

char x;

Læsning af modtaget tegn : **x = UDR0;**

Send tegn : **UDR0 = x;**

Mega2560: UCSRnA: Control and Status Registers A

UCSR0A, UCSR1A, UCSR2A eller UCSR3A

Når RXCn er 1: Nyt tegn modtaget ("kan hentes i UDR").

Når TXC er 1: "Sender tom" (klar til at sende nyt tegn og sendeskiffteregisteret tomt).

Når UDREn er 1: Klar til at sende nyt tegn ("der må skrives til UDR").

FEn : "Framing Error" (modtaget tegn har fejl i stop bit).

DORn : "Data overrun" (tegn modtaget, inden foregående er blevet læst af SW).

PEn : "Parity Error" (modtaget tegn har paritetsfejl).

Mega2560: UCSRnB. Control and Status Register B

UCSR0B, UCSR1B, UCSR2B eller UCSR3B

Bruges ved interrupt -styret USART

RXENn = 1: "RX Enable" (tænder for modtageren).
TXENn = 1: "TX Enable" (tænder for senderen).

Mega2560: UCSRnC. Control and Status Register C

UCSZn1 og UCSZn0 : Antal data bits (se næste side).

USBSn : 0 = 1 stop bit. 1 = 2 stop bits.

UCSR0C, UCSR1C, UCSR2C eller UCSR3C

UMSELn1 = 0 og UMSELn0 = 0 :
Asynkron mode !

UPMn1 og UPMn0: Valg af paritet:

UPMn1	UPMn0	Parity Mode
0	0	Disabled
0	1	Reserved
1	0	Enabled, Even Parity
1	1	Enabled, Odd Parity

Mega2560: Antal data bits

R/W	R/W	R/W	R/W	R/W	R/W	R/W	R/W	
0	0	0	0	0	1	1	0	

UCSZ _{n2}	UCSZ _{n1}	UCSZ _{n0}	Character Size
0	0	0	5-bit
0	0	1	6-bit
0	1	0	7-bit
0	1	1	8-bit
1	0	0	Reserved
1	0	1	Reserved
1	1	0	Reserved
1	1	1	9-bit

Test ("socrative.com": Room = MSYS)

Hvilket bit i registeret UCSRnA vil gå højt, når UART'en har modtaget et nyt tegn ?

- A: Bit 7: RXC
- B: Bit 6: TXC
- C: Bit 5: UDRE
- D: Bit 4: FE
- E: Bit 2: PE

Test ("socrative.com": Room = MSYS)

Før man må sende et nyt tegn via UART 0, skal man sikre sig, at senderen er klar til at modtage tegnet. Hvilken metode er korrekt ?

- A: `while ((UCSR0A | 0b00100000) == 0)`
`{ }`
- B: `while ((UCSR0A & 0b00100000) == 0)`
`{ }`
- C: `while ((UCSR0A & 0b00100000) != 0)`
`{ }`
- D: `while (UDR0 != 0)`
`{ }`

Mega2560: UBRRHn + UBRRLn. Baud Rate Register

UBRRH0, UBRRH1, UBRRH2 eller UBRRH3

UBRRL0, UBRRL1, UBRRL2 eller UBRRL3

Operating Mode	Equation for Calculating Baud Rate ⁽¹⁾	Equation for Calculating UBRR Value
Asynchronous Normal mode (U2Xn = 0)	$BAUD = \frac{f_{osc}}{16(UBRR_n + 1)}$	$UBRR_n = \frac{f_{osc}}{16BAUD} - 1$
Asynchronous Double Speed mode (U2Xn = 1)	$BAUD = \frac{f_{osc}}{8(UBRR_n + 1)}$	$UBRR_n = \frac{f_{osc}}{8BAUD} - 1$

"UBRRn" = (256 * UBRRHn) + UBRRLn

Baud rate afrundingsfejl ved 16 MHz

Baud Rate [bps]	$f_{osc} = 16.0000\text{MHz}$			
	U2Xn = 0		U2Xn = 1	
	UBRR	Error	UBRR	Error
2400	416	-0.1%	832	0.0%

250K	3	0.0%	7	0.0%
0.5M	1	0.0%	3	0.0%
1M	0	0.0%	1	0.0%
Max. ⁽¹⁾	1Mbps		2Mbps	

$$\text{"UBRR"} = (256 * \text{UBRRH}) + \text{UBRRL}$$

Test ("socrative.com": Room = MSYS)

Under initiering af en Mega2560's UART 1 skrives følgende værdier til UBRRH1 og UBRRL1:

UBRRH1 = 13;

UBRRL1 = 4;

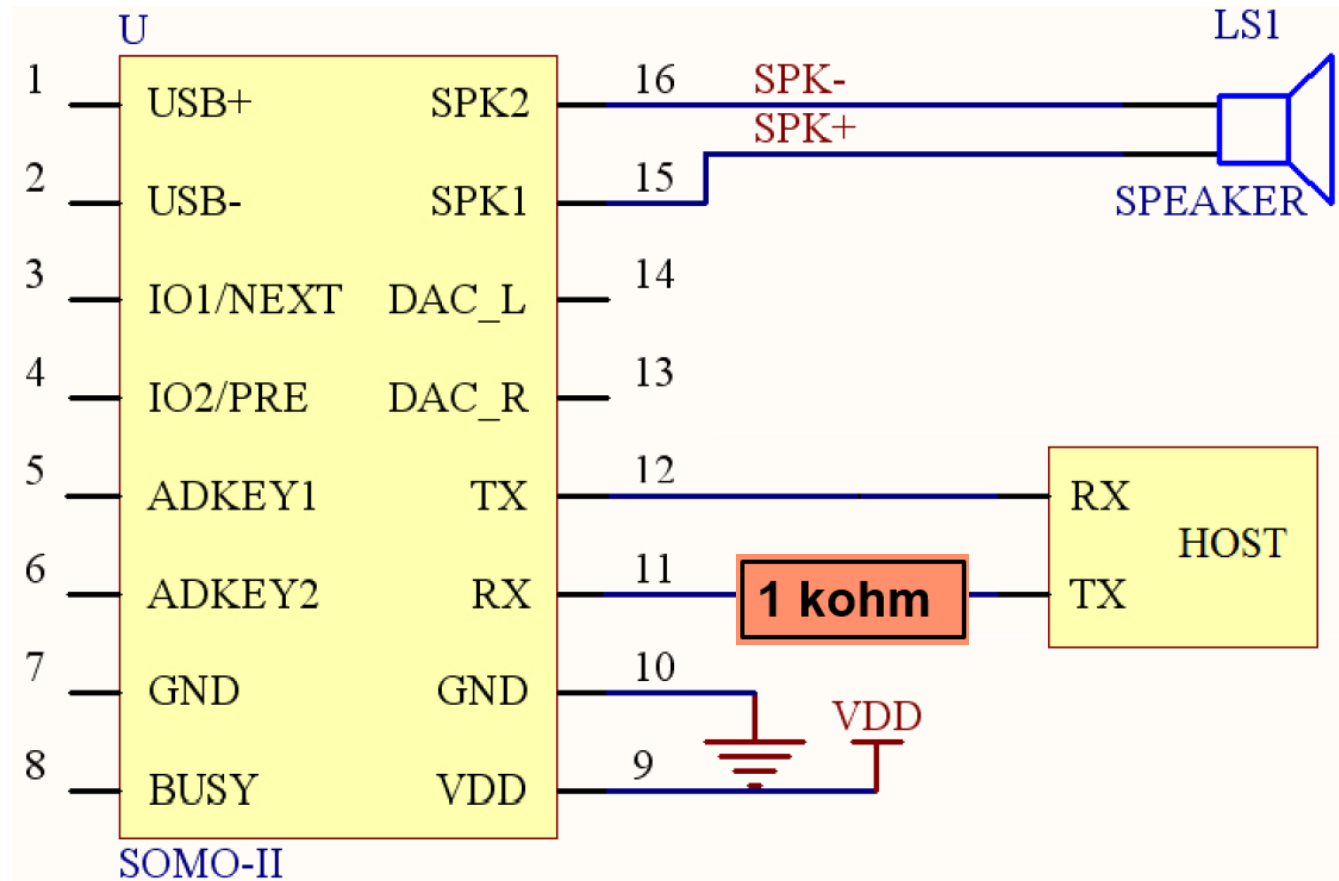

Mega2560's CPU clockfrekvens er 16 MHz.

Hvilken baud rate anvendes ?

- A: 300 bit/s
- B: 9600 bit/s
- C: 115200 bit/s
- D: 1200 bit/s

Eksempel: SOMO-II MP3 player

Eksempel: SOMO-II MP3 player

FORMAT: \$S, CMD, Feedback, Para1, Para2, Checksum1, Checksum2, \$0		
\$S	Start Character \$S is 0x7E in HEX	Every command starts with this
CMD	Command Code	Every command has a unique command code, which determines the operation
Feedback	Command Feedback	Specifies whether feedback is required by the host microcontroller in reply to the command. 1 = Feedback, 0 = No Feedback
Para1	Parameter #1	First parameter of the specific Command Code
Para2	Parameter #2	Second parameter of the specific Command Code
Checksum1	Checksum #1	First byte of the checksum. Checksum calculation shown below.
Checksum2	Checksum #2	Second byte of the checksum. Checksum calculation shown below.
\$0	End Character \$0 is 0xEF in HEX	Every command ends with this

Checksum Calculation:

The checksum is calculated using the following formula.

Checksum (2 bytes) = 0xFFFF – (CMD + Feedback + Para1 + Para2) + 1

Eksempel: SOMO-II MP3 player

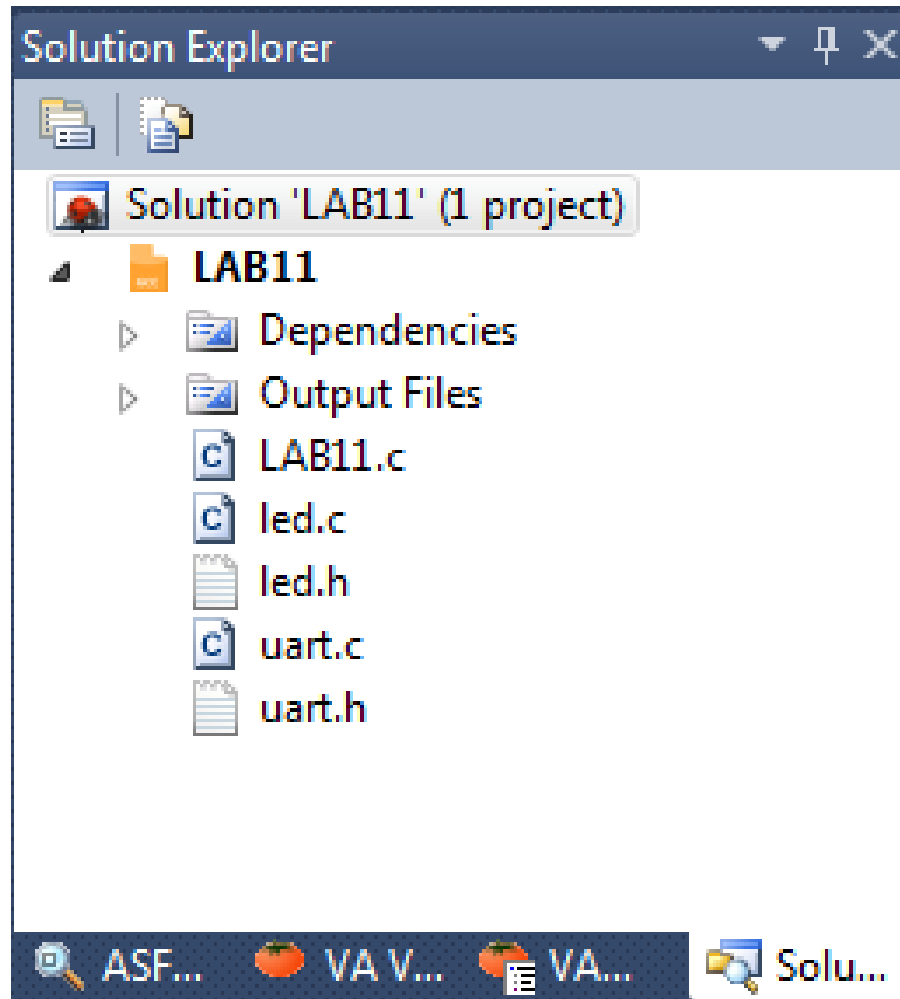

Function	Serial Command	Description
NEXT	7E 01 00 00 00 FF FF EF	If no track is currently playing, issuing the NEXT command will start playing the first track copied to the media (see Section 6). If the SOMO-II is currently playing a song or has previously played a song, this will play the next song in the order copied on to the media.
PREVIOUS	7E 02 00 00 00 FF FE EF	If no track is currently playing, issuing the PREVIOUS command will start playing the last track copied to the media (see Section 6). If the SOMO-II is currently playing a song or has previously played a song, this will play the previous song in the order copied on to the media.
SPECIFY TRACK #	7E 03 00 00 01 FF FC EF	Start playing the first track copied to the media. (See Section 6)
	7E 03 00 00 02 FF FB EF	This will start playing the second track copied to the media.
	7E 03 00 00 0A FF F3 EF	This will start playing the tenth track copied to the media.
VOLUME +	7E 04 00 00 00 FF FC EF	This will increase the volume by 1
VOLUME -	7E 05 00 00 00 FF FB EF	This will decrease the volume by 1
VOLUME #	7E 06 00 00 1E FF DC EF	This will set the volume to be 30 (30 is the Max)
	7E 06 00 00 05 FF F5 EF	This will set the volume to be 5
SPECIFY EQ	7E 07 00 00 01 FF F8 EF	This will set the EQ to pop
	7E 07 00 00 04 FF F5 EF	This will set the EQ to classic (0/1/2/3/4/5 Normal, Pop, Rock, Jazz, Classic, Bass)
REPEAT A TRACK	7E 08 00 00 01 FF F7 EF	This will repeat the first track copied to the media. (See Section 6)
	7E 08 00 00 02 FF F6 EF	This will repeat the second track copied to the media.
	7E 08 00 00 1F FF D9 EF	This will repeat the thirty first track copied to the media.

LAB11: UART driver

```
/******

* Header file for Mega2560 UART driver. *  
* Using UART 0. *  
* Henning Hargaard, 4/11 2015 *  
*****/  
void InitUART(unsigned long BaudRate, unsigned char DataBit, char Parity);  
unsigned char CharReady();  
char ReadChar();  
void SendChar(char Tegn);  
void SendString(char* Streng);  
void SendInteger(int Tal);  
/******
```

Driverens header fil.

LAB11 filer

InitUART()

void InitUART(unsigned long BaudRate, unsigned char DataBit, char Parity)

Skal initiere UART 0 til den ønskede BAUD-rate (300 - 115200), det ønskede antal databits (5 - 8) og ønsket paritet ('E' = Even Parity, 'O' = Odd Parity – ellers No Parity).

Hvis Parameteren BaudRate er mindre end 300 eller større end 115200, må der ikke ske nogen initiering af UART'en.

Hvis Parameteren DataBit er mindre end 5 eller større end 8, må der ikke ske nogen initiering af UART'en.

Vi antager, at Mega2560's clockfrekvens er 16 MHz.

Den værdi, der skal skrives til UBRR0, skal i funktionen beregnes på basis af "BaudRate"-parameteren og Mega2560's CPU clockfrekvens (afrunding kan forekomme).

Desuden skal UART'en initieres til:

- Asynkron mode.
- Både RX og TX enabled.
- 1 stop bit.
- Alle interrupts disabled.

Karakter funktioner

unsigned char CharReady()

Meddeler, om UART 0 har modtaget et tegn.

Hvis et tegn er modtaget, returneres en værdi forskellig fra 0 (= TRUE).

Hvis der ikke er modtaget et tegn, returneres værdien 0 (= FALSE).

Funktionen skal ikke afvente modtagelse af et tegn, men blot returnere oplysningen om, hvorvidt et tegn er modtaget.

char ReadChar()

Returnerer et modtaget tegn fra UART 0's modtageregister (UDR).

Funktionen skal først afvente, at et tegn modtages (bit RXC0 i registeret UCSRA0).

Derefter skal tegnet i UDR0 returneres.

void SendChar(char Tegn)

Sender et tegn via UART 0. Tegnets overføres som parameter.

Inden tegnet skrives til data registeret (UDR0), skal funktionen afvente "UART data register empty" (bit UDRE0 i registeret UCSRA0).

SendString()

void SendString(char* Streng)

Udskriver en 0-termineret tekststreng ved hjælp af UART 0.

Funktion modtager som parameter en pointer til den streng, som vi ønsker udskrevet.

Pointeren peger altid på det første tegn i strengen, som altså er 0-termineret.

Brugeren har på forhånd (altså inden denne funktion kaldes) oprettet og lagret strengen.

Nedenstående viser i pseudo-kode, hvordan funktionen kan implementeres:

```
while ("Det som pointeren peger på" ikke er 0)
{
    SendChar("Det som pointeren peger på");
    Flyt pointeren en plads frem;
}
```

SendInteger()

void SendInteger(int Tal)

Denne funktion skal udskrive værdien af integer "Tal", der modtages som parameter.

Hvis man f.eks. kalder funktionen på følgende måde:

SendInteger(147);

skal følgende tegn sendes via UART 0: '1', '4' og '7'.

Hint:

Opret først i funktionen et lokalt array af "passende" størrelse.

Brug dernæst standard-funktionen **itoa()** til at konvertere "Tal" til en streng, der gemmes i dette array. Husk **#include <stdlib.h>**.

itoa(tal, array, 10) gemmer strengen svarende til "tal" i "array" (og 0-terminerer denne).

Brug derefter funktionen **SendString()** til at sende strengen.

Ekstraopgaver for "nørden"

1. Implementer en SW UART transmitter, der anvender et vilkårligt portben som TX terminal.
2. For "nørden":
Implementer en SW UART receiver, der anvender et vilkårligt portben som RX ben.
Der kan med fordel anvendes et eksternt interruptben.
Bemærk, at det er mere kompliceret at implementere en receiver end en transmitter.

Slut på lektion 17

**"Dear Andy: How have you been?
Your mother and I are fine. We miss you.
Please sign off your computer and come
downstairs for something to eat. Love, Dad."**
